ORSEC GUIDE DEPARTMENTAL S6

**SPECIFIC PROVISION
"HEALTH MANAGEMENT"
HEAT WAVES**

PREAMBLE

This guide was written by the Directorate General of Health (DGS), in collaboration with:

- ✓ The other services of the Ministry of Solidarity and Health : the Directorate General for Social Cohesion (DGCS) and the Directorate General for Healthcare Provision (DGOS);
- ✓ The Ministry of the Interior: the Directorate General for Civil Security and Crisis Management (DGSCGC);
- ✓ The Ministry of Labour: the Directorate General of Labour (DGT);
- ✓ The Ministry of National Education, Youth and Sports: the Directorate General for School Education (DGESCO), the Directorate of Sports (DS) as well as the Directorate of Youth, Popular Education and Community Life (DJEPA);
- ✓ The Ministry for Ecological and Inclusive Transition, in particular *the Senior Defence and Security Official's service*;
- ✓ The Ministry of Housing: the Interministerial Delegation for Accommodation and Access to Housing (DIHAL).

The National Public Health Agency (ANSP) and Météo France (MF) contributed their expertise in their respective fields of competence.

This guide, the result of collaborative interministerial work, is intended for departmental prefects to assist in the development of the specific ORSEC (Emergency Response Organization) plan for managing the health aspects of heat waves. Its objective is to enable them, as well as all local stakeholders, to ensure the protection not only of populations vulnerable to heat, but also of all exposed populations.

To this end, the guide provides the necessary elements to prepare for the occurrence of heat waves, in order to limit their health consequences and manage them if necessary.

However, it does not incorporate the management measures of the interministerial instruction no. DGS/DGOS/DGCS/DGT/DGSCGC/DGEC/2020/82 of May 29, 2020 relating to the management of heatwave episodes during the next summer season in the context of the Covid-19 pandemic, which remain applicable for the summer season of 2021 insofar as the virus is still circulating.

It is the responsibility of the prefects of each department to carry out operational implementation work with all relevant local stakeholders to adapt the information provided in this guide to the local context. This ORSEC provision replaces the departmental heatwave management plan. However, it incorporates many of its principles, updating and enriching them.

THE CONTEXT

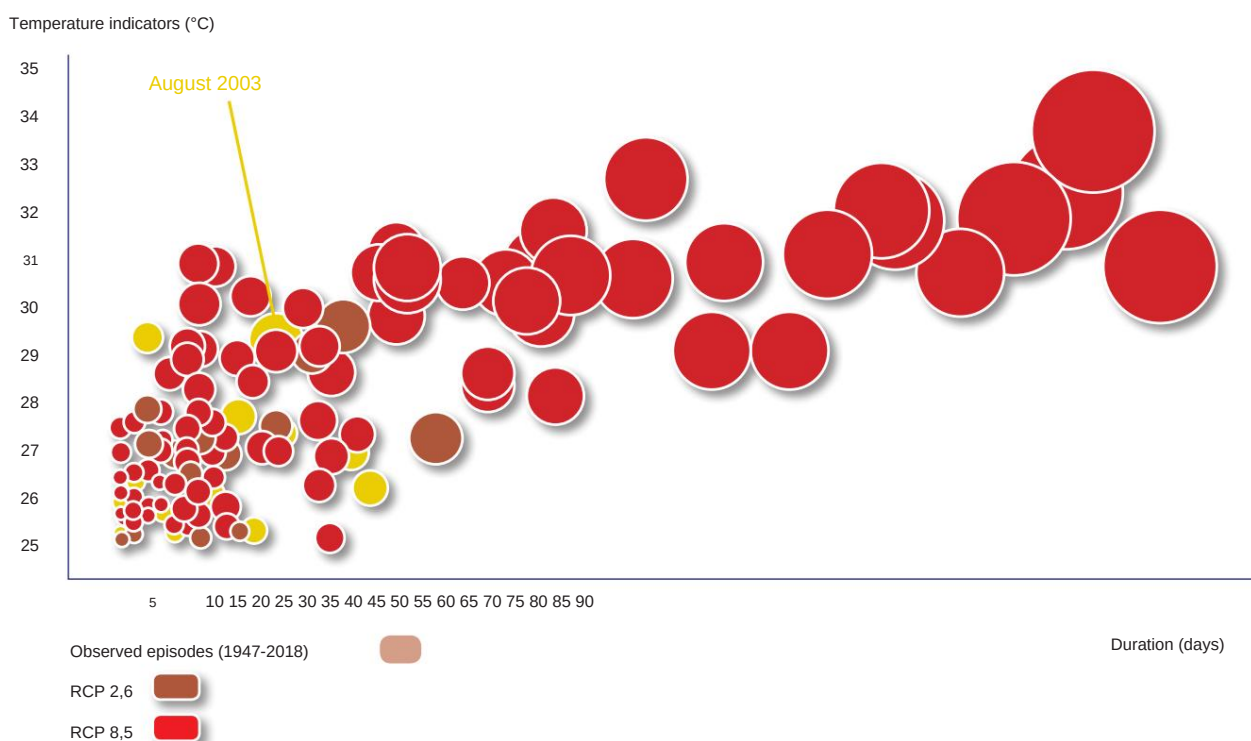

The increase in the frequency and intensity of heat waves, as well as the spatial and temporal extent of their occurrence, are among the most emblematic and noticeable consequences of climate change.

In metropolitan France, these changes are already documented: in its most pessimistic scenarios, Météo France predicts that heat waves more intense and lasting five times longer than that of 2003 could occur.

FIGURE 1 Heat waves observed and simulated in the absence of climate policy (ie RCP1 8.5 scenario)

Heat waves: projections 2071-2100

Observations and RCP scenarios 2, 6 and 8, 5

Source: Météo France

(1) RCP: representative concentration pathways, or Representative Concentration Evolution Profiles

Thus, in the near future (2021-2050), projections in metropolitan France show an increase in average temperatures, and highlight the occurrence of more frequent, longer and more intense heat waves, which could occur from May until October.

However, heat has a very rapid impact on the health of exposed populations, and particularly on that of populations vulnerable to heat, which can deteriorate rapidly.

Therefore, it is likely that the greater occurrence of heat waves, as well as the increased risk of extreme heat waves² will result

through an increase in the number of healthcare visits for heat-related illnesses, or even in the number of premature deaths caused by heat, not only among populations vulnerable to heat, but also more broadly within the entire exposed population.

In this context, the challenge today is to consolidate our preparation and response tools, within the framework of a new system that replaces the National Heatwave Plan (PNC) developed in 2004.

Lessons learned from previous years and experiences gained show that,

Ultimately, the preparation and implementation of emergency measures during heat waves, including extreme heat waves, falls to local actors, who act in a coordinated manner under the supervision of the prefect of the department.

Consequently, the preparation and health management of heat waves must now be based on a specific ORSEC provision for the health management of heat waves.

In addition, a national support and crisis management system strengthens the coordination of the various ministries involved by managing the health impacts of heat waves, and structuring their actions, including in terms of communication. It closely associates Public Health France and Météo France.

This system, which replaces the National Heatwave Plan this year, complements the measures planned locally within the framework of the specific ORSEC provision for the health management of heatwaves.

It is introduced by INTER-MINISTERIAL INSTRUCTION No. DGS/VSS2/DGOS/DGCS/DGT/DGSCGC/DGEC/DJEPVA/DS/DGESCO/DI-HAL/2021/99 of May 7, 2021 relating to the health management of heat waves in metropolitan France.

(2) Definitions given in sheet D1 below.

THE PROVISION SPECIFIC ORSEC HEALTH MANAGEMENT WAVES HEAT

To be effective and appropriate, most emergency measures implemented to protect populations during a heatwave must be carried out locally, as close as possible to the affected areas. All relevant local stakeholders (public, private, and non-profit) must be mobilized, and their actions coordinated by the prefect of the department.

PRESENTATION

After identifying all relevant and available local stakeholders (public, private, and non-profit), it is the responsibility of the prefect of the department to develop the specific ORSEC (Emergency Response Organization) plan for the health management of heat waves, in close collaboration with local stakeholders, in order to:

- ✓ **To identify the nature of the actions that** should/can be implemented by each actor, as well as the methods of their implementation.
This identification covers not only the actions to be taken by each actor before the occurrence of a heat wave, but also during the occurrence of the heat wave, and this from the level of yellow weather alert;

- ✓ **To define a structured and shared departmental organization,** led by the prefect.

This organization must, in particular, structure the exchange of information between actors, and define the procedures for alerting and mobilizing the actors, as well as those monitoring the situation;

- ✓ **To define the implementation methods of local communication,** which can be complemented by national communication, and aimed in particular at disseminating recommendations health donations to the population;
- ✓ **To define the relationship between the departmental organization and the organization established within the framework of the national monitoring and management system when the latter is activated,** particularly with regard to the reporting of information on the actions implemented.

in each sector, the measured impacts on the populations, and any difficulties encountered;

- ✓ **To plan the procedures for conducting feedback and improving the specific ORSEC health management plan for heat waves.**

ARTICULATION WITH OTHER DEVICES

The specific ORSEC provision for health management of heat waves constitutes the response of public authorities and local actors to anticipate and manage the health consequences of a heat wave.

Under the authority of the prefect of the department, it aims to mobilize the various stakeholders, disseminate health recommendations to the population, and establish a structured operational organization shared by all these stakeholders, within their respective areas of competence and responsibility.

The action levels (such as "maximum mobilization level") previously used in departmental heatwave management plans are abandoned.

In terms of communication towards actors or populations, the authorities will use the simplified terms **heatwave alert** or **extreme heatwave alert**, corresponding to the meteorological vigilance levels presented in sheet D2 below.

Finally, the specific ORSEC provision for health management of heat waves is part of the ORSEC system as a tool for organizing the response to manage the health consequences of heat waves.

The elements of this specific provision should not repeat the missions or actions already developed in other ORSEC provisions, but should be based on existing operational tools that can be used according to the circumstances.

all or part, including:

- ✓ ORSEC "alert and information of the populations";
- ✓ ORSEC "public information unit";
- ✓ ORSEC "support for the population",
- ✓ ORSEC "mass death management".

IMPLEMENTATION BY THE STAKEHOLDERS TERRITORIALS RECORDED

The specific ORSEC provision for the health management of heat waves organizes the mobilization of territorial actors as well as the coordinated implementation of their actions in order to prevent the health effects of heat waves.

Each public or private actor listed in the specific ORSEC plan for the health management of heat waves must, in particular:

- ✓ **Prepare your own internal organization for managing the event and provide a summary description to the prefect;**
- ✓ **Being able to fulfill its assigned missions : each stakeholder has the option of implementing all or part of the actions it deems relevant, or those provided for in the specific ORSEC (Emergency Response Organization) plan for the health management of heat waves, and identified in the planning guide. The implementation of these actions takes place within the framework**

a progressive response, adapted to the characteristics of the heat wave and local contextual elements.

GUIDE FOR THE DEVELOPMENT HEALTH COMPONENT OF THE PROVISION SPECIFIC ORSEC WAVE MANAGEMENT HEAT

To assist prefects in developing the specific ORSEC plan for the health management of heat waves, this guide offers a standard template that can be directly incorporated into departmental plans.

This standard template is divided into three parts:

Part 1 : The doctrine. It provides generic information, in the form of fact sheets. This is a general presentation of the system, intended for educational purposes and aimed at services, which can be reproduced *in full* in departmental systems, while taking into account the local context, in conjunction with partners;

Part 2 : Fact sheets describing the health management measures to be implemented at the territorial level, particularly for the red level of weather alert, are provided.

Part 3 : Mission sheets by actors.

These fact sheets describe, on the one hand, the actions that prefectures must take as part of their operational planning (preparing the collective response), and on the other hand, the management measures that each stakeholder may need to implement, depending on the context. Document templates are available.

operational options are offered.

THE SHEETS OF DOCTRINE (D)

FICHE D1

HEAT WAVES: DEFINITION, FORECAST, ACTIVATION

DEFINITION

The term "heat wave" is a generic term that refers to a period during which temperatures can pose a health risk to the population.

The possibility of a heatwave occurring is particularly heightened during the seasonal monitoring period, which extends from June 1st to September 15th of each year.

The term "heat waves" covers the following situations:

✓ **Heat wave:** intense heat of short duration

duration (one or two days) presenting a health risk, for vulnerable or overexposed populations, particularly due to their working conditions or their activity

physical; it can be associated with the yellow weather alert level;

✓ **Persistent heat wave:** high temperatures (IBM1 near or below departmental thresholds) that last for more than three days; these situations constitute a health risk for vulnerable or overexposed populations, particularly due to their working conditions or activities.

physical; it can be associated with the yellow weather alert level;

✓ **Heatwave:** a period of intense heat during which the IBM (Integrated Minimum Temperatures) reach or exceed departmental thresholds for three consecutive days and nights and is likely to constitute a health risk, particularly for vulnerable or overexposed populations.

It is associated with the orange weather alert level;

✓ **Extreme heatwave:** an exceptional heatwave due to its duration, intensity, and geographical extent, with significant impacts not only on health but also on society. It is associated

at the red weather alert level.

FORECAST: THE DEVICE WEATHER WARNING FOR HEAT WAVES

The forecast of a heat wave relies on the weather warning system implemented by Météo France within the general framework of weather monitoring and alerts. This system is designed to warn not only public authorities, but also the general public, of the possibility of meteorological phenomena. It also allows for the dissemination of recommendations on appropriate behavior to the public.

This system takes the form of a national vigilance map and a monitoring bulletin, which are updated twice a day (6 and 16 hours), and are accessible on the Météo-France website.

➤ <https://vigilance.meteofrance.fr>

- (1) IBM: biometeorological index. This is the combination of minimum and maximum temperatures averaged over three days.
- (2) Interministerial Circular No. IOC/E/11/23223/C of 28 September 2011 concerning the weather alert and vigilance procedure. It defines the procedure for issuing weather vigilance orders in metropolitan France, as well as its coordination with the alerting of authorities and, more generally, civil security measures.

DOCTRINE SHEETS (D)

The national alert map includes:

- ✓ A summary map by department represents the maximum level of danger, all phenomena combined;
- ✓ A map dedicated to the heatwave phenomenon, featuring a thermometer in the title, indicates the heatwave danger level for each department. The phrase "outside the heatwave period" appears in the inset outside the production period.

- ✓ **Regarding heat waves, meteorological monitoring** is reinforced for the heat wave phenomenon from June 1st to September 15th of the year (seasonal monitoring).

The heatwave phenomenon is identified by the pictogram which appears on the map at the level of the heatwave sticker and on the internet broadcast for each department concerned.

A red weather alert can only be issued for a department already under an orange alert and results from:

- ✓ Based on a combination of expert meteorologists (who focus on assessing the unusual nature of the current or predicted heatwave for each department) and epidemiologists (who assess the expected health risks in terms of excess mortality and potentially impacted population categories),

- ✓ This involves an exchange between meteorological experts, epidemiologists, and national health authorities, clarifying the unusual nature of the temperatures, the expected health risks, and the potentially affected population groups. This exchange may lead to the decision to activate the red level of the weather alert, also taking into account any specific contextual factors (summer migrations, large-scale sporting events, healthcare system overload, etc.) when the analyses suggest a level close to red.

ACTIVATION A LEVEL OF VIGILANCE

The choice of moving from one level of weather alert to another (with the exception of level red) falls under the expertise of Météo-France.

- ✓ **Regarding red alerts: given the current** state of knowledge and the robustness of available operating systems, the general principle for assessing the advisability of placing a department on red heatwave alert is based on:

- ✓ The unusual meteorological nature of the heatwave affecting the department concerned;
- ✓ The expected health risk in terms of morbidity and excess mortality, as well as the potential health impact on other population categories besides only vulnerable populations.

FICHE D2

THE HEALTH IMPACTS OF THE WAVES
HEAT AND THE POPULATIONS AFFECTED

DIRECT HEALTH IMPACTS

The effect of heat on the body is immediate, and occurs from the first increases in temperature (yellow weather alert level): **the impacts of heat on the health of populations are not limited to extreme phenomena.**

When exposed to heat, the human body activates thermoregulatory mechanisms that allow it to compensate for the increase in temperature (sweating, increased blood flow to the skin through dilation of cutaneous vessels, etc.). However, these thermoregulatory mechanisms can sometimes become overwhelmed, leading to pathologies related to heat.

Heat-related symptoms manifest themselves, the main ones being headaches, nausea, muscle cramps, and dehydration. The most serious risk is heatstroke, which can lead to death.

In addition to these risks, hyponatremia represents a serious, often overlooked complication. It is a decrease in the concentration of salt (or sodium, Na) in the blood, which can be a consequence, in particular, of excessive water intake.

✔ **The populations concerned:** the health effects are first manifested in certain populations, which are more vulnerable to heat.

TABLE 1 Populations vulnerable to heat

Vulnerable people	Overexposed populations
These are people whose health condition, life event, or age makes them more at risk.	These are people whose living or working conditions, behavior, or environment make them more at risk.
• Elderly people • Pregnant women • Young children (under 6 years old) • People suffering from chronic illnesses • People with disabilities • People taking certain medications that can increase the effects of heat or hinder the body's adaptation	• People in precarious situations, homeless • People living in squats, camps, slums and unequipped reception areas • People living in conditions of isolation • People living in poorly insulated housing thermally • People living in dense urban areas, <i>especially</i> where urban heat islands exist • Workers exposed to heat, outdoors or in hot indoor environments • Athletes, especially outdoor athletes, whose intense and prolonged physical exertion makes them vulnerable to heat • Populations exposed to episodes of ambient air pollution • Detainees

DOCTRINE SHEETS (D)

Vulnerable populations are the first to be affected when a heat wave hits.
But the more intense the heat becomes, the larger and more diverse the populations will be.

The number of people affected will increase: everyone, including young people and healthy adults, can then be affected.

TABLE 2 The populations concerned (details in Table 1) according to the levels of weather alert

Definitions	Corresponding weather alert	Populations likely to be impacted
Heat wave: intense heat of short duration (one or two days) Persistent episode heat: temperatures close to or below departmental thresholds and which persist over time (more than three days).	YELLOW	Vulnerable populations: elderly people, young children, people taking certain medications people with disabilities. Overexposed populations: homeless people, overexposed workers to the heat, populations in overexposed housing in the heat, athletes, especially outdoor sports entire exposed population
Heatwave: a period of intense heat in which temperatures exceed departmental thresholds for three consecutive days and nights.	orange	
Extreme heatwave: an exceptional heatwave due to its duration, intensity, geographical extent, with a strong health impact and the appearance of collateral effects.	rouge	

The health monitoring system : the health consequences of exposure to heat are reflected on the one hand by an increase in the use of emergency care for heat-related illnesses (HRIs), and on the other hand by an increase in observed mortality.

In comparison, the heat waves of the summers of 2003, 2006, 2015, 2018 and 2019 had caused 15,000, 2,100, 1,739, 1,480 and 1,462 additional deaths respectively.

Thus, between 1974 and 2020, 39,297 excess deaths were observed during these heat waves, including 15,257 in 2003.

As an example, the 3 heat waves of summer 2020 resulted in 1,924 excess deaths, and accounted for 15% of emergency room visits and 21% of SOS doctor consultations.

The syndromic surveillance system called SurSaUD® (Health Surveillance of Emergencies and Deaths), which is managed by Public Health France collects, monitors and analyzes indicators that allow for the estimation of a health impact based on four sources of information:

- ✓ Data from hospital emergency services adhering to the OSCOUR® network (organization of coordinated emergency surveillance);
- ✓ Data from the SOS Médecins network;
- ✓ Mortality data from state services - vile, transmitted by INSEE;
- ✓ Data from monitoring the causes of mortality via electronic certification (INSERM's CépiDc).

During the seasonal monitoring period (from June 1st to September 15th), during which the probability of a heat wave is particularly high:

- ✓ Monitoring and analyzing morbidity indicators (OSCOUR® network and SOS Médecins network) allows us to measure the immediate health impact of the heatwave. In the event of a major health impact, the Regional Health Agency (ARS) may implement the ORSAN plan, aimed at adapting the organization of healthcare services and covering the three sectors of outpatient, hospital, and social care;
- ✓ In addition, mortality data, which cannot be used in the immediate aftermath of a heat wave, are analyzed at the end of the season to draw up an assessment.

The Regional Health Agencies (ARS) make available to the prefect information relating to the direct health impacts of heat waves.

INDIRECT HEALTH IMPACTS

The increase in temperature has as a corollary an increase in indirect health risks such as:

- ✓ **Risk of drowning : In France**, accidental drownings are responsible for approximately 1,000 deaths each year, including approximately 400 during the summer period, making it the leading cause of accidental death in everyday life for those under 25.

The DROWNINGS survey, carried out every 3 years during the summer by Public Health France, shows that the daily number of accidental drownings varies according to the temperature, with more drownings during periods of high heat.

During the summer of 2018, classified by Météo France as the second hottest summer since 1900, the number of accidental drownings recorded by the DROWNINGS survey was the highest of all surveys, even though these drownings were less frequently fatal. Thus, 1,649 accidental drownings were observed in 2018, compared to an average of 1,232 for the six previous surveys from 2003 to 2015.

At the height of the 2018 heatwave, the cumulative effects linked to the days and the temperature produced a peak of 89 drownings observed on the first weekend of August (August 5-6).

Similarly, during the heat wave period from August 6 to 13, 2020, monitoring of emergency room visits via the OSCOUR® network shows a 22% increase in emergency room visits for drowning compared to the same period in 2018 and 2019.

- ✓ **Increase in respiratory or cardiovascular diseases linked to air pollution, including ozone : high temperatures promote the production of ozone**, and this pollutant is particularly present in summer.

Ozone concentrations are therefore higher on hot, sunny days. Studies conducted in 18 cities

French studies have shown that the risk of death associated with ozone and fine particulate matter is higher on hot days. This demonstrates a synergistic effect between pollutants and temperature.

THE IMPACTS OF THE OCCURRENCE OF AN EXTREME HEAT WAVE (RED WEATHER ALERT)

A red heatwave alert is triggered when the region experiences an extreme heatwave, exceptional in its duration, intensity, or geographical extent. This is characterized by extremely high daytime and nighttime temperatures, sometimes exceeding those recorded in 2003.

Under these conditions, the heat wave is likely to have a significant impact on health and also to disrupt the continuity of social and economic activities.

From a health perspective, the red alert level differs from the orange level in that the heatwave can have **a health impact on the entire exposed population** if health recommendations are not followed.

With an orange alert, it is mainly the vulnerable populations (infants, the elderly, those in situations of dependency, particularly at home, pregnant women...) or those overexposed to heat (people in precarious situations, outdoor workers...) who are most affected.

From a societal perspective, red alert implies strengthening measures to protect the population, by implementing **adjustments and restricting activities**. During a vi-

orange alert, the measures are mainly awareness-raising and adaptation measures.

TABLE D3
**RECOMMENDATIONS
SANITARY WARE**

The High Council for Public Health (HCSP) has issued health recommendations which aim in particular to prepare the population for the occurrence of a heat wave and, if necessary, to limit its health impact.

These recommendations are written in the form of fact sheets available on the HCSP website.

➤ <https://www.hcsp.fr/explore.cgi/avisrapportsdo-main?clefr=418>.

Primarily intended for vulnerable populations and the general public, these fact sheets contain general information on the dangers of heat, signs of health problems and ways to protect oneself.

These fact sheets are also intended for various healthcare professionals (general practitioners, pharmacists, etc.), as well as professionals working with vulnerable populations (children, the elderly, the homeless, etc.) and community stakeholders (staff of facilities for the elderly, staff of early childhood centers, organizers of sporting events, employers, administrative detention centers, and other establishments).

penitentiary, etc.).

Furthermore, recommendations regarding the proper use of the medication during a heatwave are issued by the French National Agency for Medicines and Health Products Safety (ANSM). These are available on the ANSM website.

➤ <https://ansm.sante.fr/dossiers-thematiques/extreme-climatic-conditions-and-health-products>

Information relating to the preservation of

Health products for use during heat waves are also available for consultation there.

All of these recommendations are also available on the Public Health France website.

➤ <https://www.santepubliquefrance.fr/health-determinants/climate/extreme-heat/heatwave>

SHEET D4

TERRITORIAL ACTORS CONCERNED

Although vulnerable populations are the first to be affected when a heat wave hits, the more intense the heat becomes, the larger and more diverse the categories of affected populations will be, until it affects the entire exposed population, including young and healthy adults.

Therefore, the actors involved in each department in the preparation and health management of heat waves are numerous and varied (non-exhaustive list):

- ✓ Local authorities,
- ✓ The various interdepartmental departmental delegations,
- ✓ The departmental directorate of national education services and the rectorate,
- ✓ The Regional Health Agency,
- ✓ Healthcare, social and medico-social establishments,
- ✓ The departmental council,
- ✓ Social protection organizations,
- ✓ Home care and support services person,
- ✓ Approved civil defense associations,
- ✓ The departmental fire and rescue service course,
- ✓ Representatives of the prison system,
- ✓ Funeral service providers,
- ✓ The Regional Olympic and Sports Committees and the Departmental Olympic Committees and

Sportspeople, organizers of sporting events,

- ✓ Transport and energy distribution infrastructure managers,
- ✓ Those responsible for the production and distribution of drinking water,
- ✓ The transport and mobility organizing authorities (depending on the case: municipalities, urban areas, regions, the State) responsible for travel and transport,
- ✓ Transport operators (SNCF, etc.) and the transport authorities,
- ✓ Managers of accommodation facilities and adapted housing,
- ✓ The actors involved in social outreach (street patrols, health mediation teams, 115 emergency hotline, social emergency services, day centers, etc.),
- ✓ Integrated reception and guidance service managers.

It is the responsibility of the prefect of the department to identify all the relevant local stakeholders and to involve them not only in the development of the

specific ORSEC provision for health management of heat waves, but also its implementation where appropriate.

During the planning phase of the specific provision, the roles and responsibilities of each of the actors will be jointly defined.

This will allow each individual to structure or adapt their internal organization accordingly:

- ✓ **Inventory of human and material resources** available at a **minimum** from June 1st to September 15th, which corresponds to the period of most probable occurrence of heat waves;

- ✓ **Identification of populations**, particularly vulnerable populations, according to its missions or area of competence;

- ✓ **Identification of the actions and measures** that it is his responsibility to carry out depending on the situation-tion, as well as the modalities of this implementation artwork ;

- ✓ **Structuring of the internal organization** aimed at implementing the means required for the accomplishment of the identified missions and actions, as soon as the situation requires it or the prefect has requested it;

- ✓ **Definition of indicators and means of monitoring the situation and its evolution**

resolution, given the measures put in place artwork ;

- ✓ **Definition of the procedures for exchanging information and reporting to the prefect of the department**, as well as to central administrations where applicable.

Furthermore, once structured, this internal organization must be regularly evaluated and tested by each of the actors concerned (in particular through exercises), then adapted as needed.

This joint development work, carried out on the basis of the internal organizations of each actor, allows the prefect to verify that each actor concerned is operational, and thus to reinforce the departmental organization developed within the framework of the specific ORSEC provision for the health management of heat waves.

THE SHEETS MANAGEMENT (G)

G1 SHEET

LOCAL HEALTH MANAGEMENT PROCEDURES

The measures taken by the actors are directly based on the intensity and danger of the phenomenon, without being qualified by a number or a specific name (for example "maximum mobilization").

BEFORE THE PERIOD SEASONAL WATCH

The occurrence of heat waves must be prepared by all relevant territorial actors, in a coordinated manner and led by the prefect of the department, in advance of the period of their most probable occurrence (seasonal monitoring).

During this preparation phase, it is essential to verify that everyone is well-organized and able to implement their assigned actions based on the evolving situation, as outlined in the specific ORSEC (Emergency Response Organization) plan for managing heatwaves. The prefect ensures this is the case by convening all relevant local stakeholders before the start of each summer season.

He also takes this opportunity to ensure that the information exchange channels between the actors are operational.

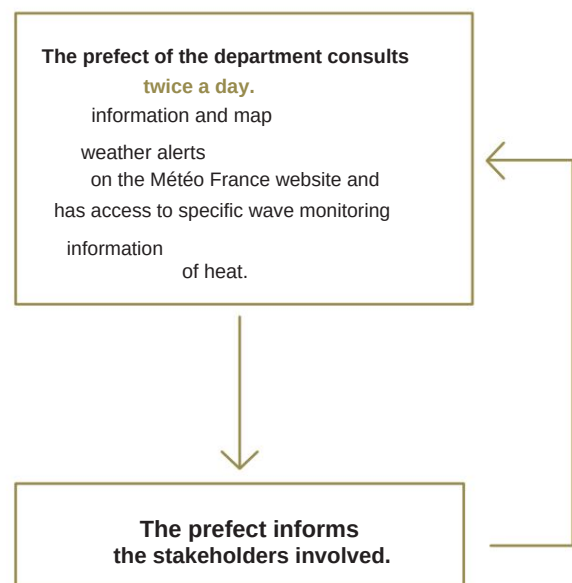

Indeed, the sharing of information between the different actors and its centralization at the level

The prefect of the department is essential: the prefect therefore ensures the establishment of a circuit for the exchange of information with the actors concerned, which must be systematized and procedural.

DURING SEASONAL STANDBY PERIOD (JUNE 1ST TO SEPTEMBER 15TH)

✓ **The prefect :** ensures the monitoring of weather alerts (consulting information on the dedicated Météo France website) and transmits meteorological information via the usual means to all

The stakeholders involved. They disseminate the information within their organizations. They forward any useful information to the prefect.

The previously used levels are abandoned in favor of a simplified semantics:

- **In the event of an orange alert:** the authorities speak-heatwave alert ring;
- **In case of red alert:** the authorities will speak of EXTREME HEAT WAVE ALERT.

Local Météo France services are at the disposal position of the prefectural services to help them interpret and refine the weather forecasts concerning them, where applicable.

✓ **Territorial actors:** adapt their internal organization, and put in place the measures which are their responsibility (see O2A to O2L actor sheets).

In particular, local authorities verify municipal registers and ensure the coordination and mobilization of their services.

vices and associations that interact with isolated and vulnerable populations.

The information exchanged by the prefect and territorial actors during the seasonal monitoring period relates not only to the meteorological situation and the level of vigilance, but also to the measures implemented by each of the actors, as well as any difficulties encountered.

Regarding the broadcast health recommendations among the population (see sheet D.3)

The prefect and the relevant local stakeholders ensure that they are disseminated to the public and properly understood.

To achieve this, they have various tools at their disposal, which are available on the website of

Public Health France:

➤ <https://www.santepubliquefrance.fr/determinants-de-sante/climat/fortes-chaleurs-canicule/outils>

These tools are also available on demand: their distribution is carried out locally.

by Public Health France with partners and relays (associations, local authorities, etc.).

**IN CASE OF A HEAT WAVE
(OUTSIDE OF RED ALERT, SEE
FACT SHEET G.2)**

As soon as a heatwave is forecast or occurs, the prefect informs all relevant local services. Together, they analyze the situation and implement appropriate measures, including those identified in the specific ORSEC plan for health management of heatwaves.

The prefect can also bring together stakeholders to facilitate information sharing and management oversight, particularly those involved in health and social services. He activates the case

where applicable, its departmental operational center (COD).

Regarding information sharing between the actors

The information shared between the prefect and local stakeholders are particularly involved on :

- ✓ Weather data;
- ✓ The actions implemented by each individual;
- ✓ Any difficulties encountered;
- ✓ Communication actions carried out.

The Regional Health Agency (ARS) provides the prefect with the information it has:

- ✓ Data relating to the health impact of the heat wave (health indicators);
- ✓ The response of the health system;
- ✓ If applicable, the evolution of the number of recorded deaths.

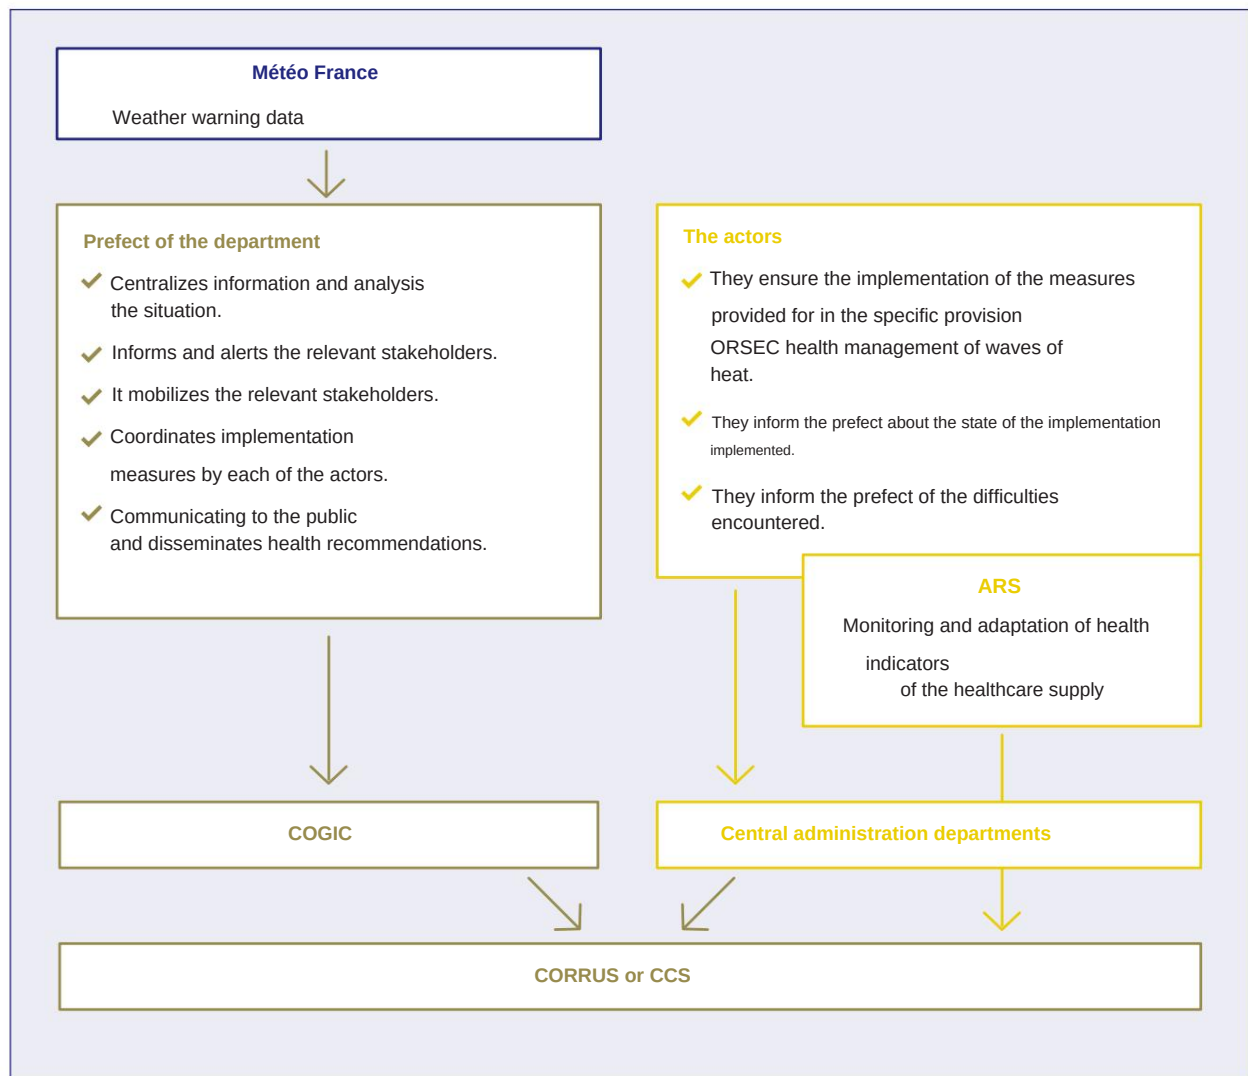

Regarding the broadcast recommendations in the event of a heat wave

The prefect, and where applicable local stakeholders, relay the messages to the affected populations. Various resources are available on the website of the Ministry of Health, under the heatwave section: <http://solidarites-sante.gouv.fr/sante-et-environnement/risques-climatiques/>

➤ _____

Finally, a telephone information platform can be activated by the ministry to answer questions from individuals.

DIAGRAM Transmission and feedback of information

In the event of concurrence between the onset of a heat wave and a peak in air pollution

It is the responsibility of the prefect to implement all planned regulatory measures aimed at reducing air pollution levels, particularly VOCs in the event of an ozone peak:

- ✓ **In the residential and commercial sectors :** report maintenance or cleaning work carried out by the population or local authorities with products based on organic solvents;

- ✓ **In the industrial sector :** postpone certain operations emitting volatile organic compounds or VOCs (maintenance work, degassing of an installation, loading or unloading of products emitting volatile organic compounds in the absence of a vapor recovery device, etc.);

- ✓ **In the transport sector :** restrictions on the circulation of the most polluting vehicles, as defined by the classification provided for in [Article R. 318-2 of the Highway Code](#). (differentiated traffic) helps to reduce emissions of particulate matter (PM10) and nitrogen dioxide (NO2).

MANAGEMENT SHEETS (G)

In the event of a pollution alert, the prefect nevertheless ensures that transport options are maintained and guaranteed for professionals and volunteers essential to the proper implementation of heatwave management measures.

The prefect keeps the COGIC informed of the actions implemented, as well as the difficulties encountered, by entering information into the SYNERGI application of the ORSEC portal.

**AFTER THE PERIOD
SEASONAL WATCH**

Systematically, the systematic implementation of a shared feedback process (RETEX) among all territorial stakeholders constitutes a

fundamental learning process enabling the strengthening of prevention actions and the management of health emergencies.

Also, at the end of each seasonal monitoring period, the prefect of the department conducts a RETEX, which aims to take stock of the actions implemented, to identify virtuous practices as well as the shortcomings observed during the management of the season.

He conducts a comprehensive and shared analysis with all relevant territorial actors, in order to identify the elements to capitalize on or strengthen, which will be integrated into an action plan aimed at adapting the specific ORSEC provision for health management of heat waves.

Finally, it systematically sends a summary of actions to COGIC before November.

implementations in his department, as well as, where applicable, any difficulties encountered.

IN SUMMARY

	CHARACTERIZATION	DECISION OF IMPLEMENTATION	MEASURES
Before the summer period	/		• Preparation of each stakeholder, • Development or updating of the specific ORSEC plan for health management during heat waves, • Potential completion of exercises.
During seasonal monitoring	/	Automatic from June 1st as of September 15th	• Monitoring of meteorological data, • Dissemination of health recommendations to the public vulnerable populations, • Implementation of population-based measures by each actor (see measures sheets O2.A to O2.L).
In the event of a heat wave (heat wave, persistent episode) heat and heatwave)	• Heat wave: intense heat short-term, • Persistent heat wave: temperatures near or below departmental thresholds and which last over time (more than 3 days), • Heatwave: a period of intense heat during which temperatures exceed departmental thresholds for 3 days and 3 consecutive nights	Prefect with the support of the Regional Health Agency (ARS)	• Monitoring of meteorological data, • Situation analysis, • Dissemination of the alert and coordinated mobilization of territorial actors, • Dissemination of health recommendations, particularly for populations vulnerable to heat, • Implementation by each actor of the population measures (see measures sheets O2.A to O2.L).
Extreme heatwave (red weather alert)	• Exceptional heatwave by its duration, intensity, and geographical extent, with a strong health impact and the emergence of collateral effects.	Ministry of Health, related to the other relevant ministries (including the Ministry of the Interior and the Ministry of the Environment)	• Monitoring of meteorological data, • Situation analysis, • Dissemination of health recommendations to the entire population, • Strengthening communication and mo- actions promotion of all possible media, • Implementation by each actor of the popula- measures tional (see measurement sheets), • Possible implementation of restrictive measures activities.
After each summer period	/	Beyond from September 15th if the seasonal watch is not extended	• Development of a feedback report, • Revision, where necessary, of the specific provision ORSEC (Emergency Response Organization) - Health management of heat waves • Adaptation of the internal organizations of each ac- if necessary, • Preparation and transmission of a summary to the relevant central administration departments, and in particular to the ministries of health and the interior.

G2 SHEET

LOCAL HEALTH MANAGEMENT PROCEDURES DURING AN EXTREME HEAT WAVE (RED WEATHER ALERT)

In the event of a red heatwave alert, the prefect must systematically activate the departmental operations center (COD) for monitoring, ensuring that all relevant services are included. The prefect then takes appropriate regulatory measures, such as restrictions or prohibitions, within the scope of their administrative police powers, based on an analysis of the situation and in consultation with their partners.

He also ensures that communication measures with the public are strengthened.

LOCAL MANAGEMENT MEASURES

In departments classified as red alert, the attention of prefects and relevant stakeholders must be focused on:

- ✓ Strengthening alert measures in direct partnerships and communication with the public. Communication will focus in particular on recommendations.

common-sense principles. They aim, at a minimum, to not not to expose oneself without precaution to temperatures whose mention, for example more than 40° in the shade, draws attention to the risks of heat stroke and its dangers;

- ✓ The recommendations or measures to res-restrictions on activities during the hottest hours of the day, as well as the scheduling of activities outside these periods, based on the example of the daily rhythm of southern European countries in the summer period;
- ✓ Access to air-conditioned spaces, open during hours adapted to the circumstances, or to water or refreshment points. These locations could be usefully identified, signposted, or mapped for public access.

In addition, the prefect will be able to:

- ✓ **Strengthen the field actions** carried out by the actors closest to populations vulnerable to heat (mayors, rescue and volunteer associations, civic service volunteers, employers, public transport managers, etc.), to optimize and adapt the methods of disseminating health recommendations (increased broadcast frequencies, visits to residents registered on the lists, etc.);
- ✓ **Facilitating access to receiving establishments in front of the public** whose premises are being refreshed (extended opening hours, free access, etc.);
- ✓ **Facilitating access to swimming pools and designated bathing areas** (extending opening hours, free access, etc.);
- ✓ **Ensure the implementation of collective cooling measures** in cities, public transport, establishments open to the public (water spray ramps, water features, etc.);

✓ **Ensure that adjustments to working time** are effective, or even the cessation of certain activities deemed non-essential;

✓ **To ensure, in conjunction with the Regional Health Agency (ARS), the continuity of activities in essential sectors is maintained**

to the healthcare of individuals: continuity of care in the city, continuity of public hospital service, cooperation between hospital and medico-social sectors, availability and capacities of medical transport providers and funeral operators;

✓ **To ensure, in conjunction with the ARS, the maintenance of production capacities of water plants** intended for human consumption;

✓ **To make all decisions (e.g., requisitions) and arbitrations (e.g., in case of power outages) necessary to maintain the activities of essential actors**

(including professionals in the rescue and health sectors, public or private entities responsible for water distribution, managers of swimming pools or authorized bathing areas, etc.);

✓ **In the event of an exceptional health situation**, in particular in the event of an epidemic in the territory, ensure that these measures are in line with those issued by the health authorities¹.

More precisely :

Regarding the protection of primary school children and childcare facilities

✓ School trips and festive school events

Activities are cancelled or postponed, unless they take place in cooler locations without requiring travel that would expose participants to the heat. Similarly, physical education and sports activities at school are cancelled, with the exception of aquatic and nautical activities;

✓ School reception and activities are maintained.

Educational teams are asked to adjust afternoon activities to suit the temperatures and to ensure students have access to water, in coordination with the local community. If the conditions for keeping students in class are no longer deemed acceptable, temporary school closures will be considered on a case-by-case basis between the prefect, the rector or the IA-DASEN, the district's national education inspector and the mayor, seeking to identify alternative solutions for accommodating students in better-cooled premises whenever possible;

✓ Outings from group activities for minors

Activities (child protection facilities and services, leisure centers, holiday camps, and scouting camps) must be postponed, unless they take place in cooler locations without requiring travel that would expose participants to the heat. Organizers of these programs, where applicable, must modify their activities to avoid offering physical and sporting activities, with the exception of aquatic and nautical activities. Afternoon activities must be adapted to the temperatures. Access to water must be guaranteed.

Locally the prefect may prohibit activities or interrupt a reception when there is a risk to the health or physical safety of the minors being accommodated.

Regarding protection vulnerable people

Mayors are urged to continue their efforts to support vulnerable people isolated at home and registered with the municipal authorities, and to continue this support for a few days after the end of the heatwave. The health effects of the

(1) The measures for managing heatwave episodes that may occur in the context of the Covid-19 pandemic, and which are described in the interministerial instruction no. DGS/DGOS/DGCS/DGT/DGSCGC/DGEC of May 29, 2020, continue to apply.

(2) A decision support sheet is available on the websites of the Ministry of Health and the Ministry of National Education and Youth (<https://www.education.gouv.fr/recommandations-aux-directeurs-d-ecole-et-chefs-d-etablissement-pour-prevenir-les-effets-de-la-10454>).

MANAGEMENT SHEETS (G)

Heatwaves can indeed be postponed. Mayors will be able to set up daily access to air-conditioned spaces for these people, for example by organizing transport shuttles.

Regional health agencies are asking directors of nursing homes for dependent elderly people (EHPAD) to activate their emergency plan in order to take all necessary measures to protect their residents.

The prefects are working to increase the number of emergency accommodation places, extend the opening hours of day centers, and strengthen communication measures.

Information services and the 115 emergency hotline teams and outreach teams are available to assist vulnerable and homeless individuals. Those living in camps, slums, and unsanitary housing will require special attention, particularly from mobile teams. Regarding access to drinking water in camps and slums, a map is available on the Résorption Bidonvilles³ platform.

This system allows users to identify sites with access to drinking water and those requiring intervention (emergency connection, water distribution, etc.). Access to the platform is subject to approval by government services. Requests can be submitted via the following link:

➤ <https://resorption-bidonvilles.beta.gouv.fr/#/landing>

Finally, municipalities are encouraged to provide access to air-conditioned spaces and drinking water distribution points for vulnerable, homeless, and isolated individuals.

human (list of free drinking water stations and fountains) that they will have identified.

Regarding protection workers

It is the responsibility of each employer, under their safety obligation, to conduct a daily reassessment of the risks incurred by each employee during a red alert phase, based on:

- ✓ Temperature and its evolution throughout the day;
- ✓ The nature of the work to be carried out, particularly outdoors or in thermal environments already exhibiting high temperatures, or involving a physical load;
- ✓ The age and health of the workers.

Based on this risk reassessment:

- ✓ Workload arrangements, schedules and more generally work organization must be adjusted to guarantee the health and safety of workers throughout the red alert period;
- ✓ The list of employees benefiting from teleworking must be re-examined, paying particular attention to pregnant women, people with chronic illnesses or disabilities, etc.

If the assessment shows that the measures taken are insufficient, particularly for work carried out at very high temperatures and involving significant physical strain, for example roof insulation or roofing work, repeated handling of heavy loads, the employer must then decide to stop the work.

The employer must take these instructions into account and record them in the single risk assessment document. When work is carried out in an establishment by an external company, these instructions must be taken into account and recorded, where applicable, in the prevention plan. During building or civil engineering operations, these instructions must be taken into account and recorded in the general safety and security coordination plan.

health protection or the specific health and safety protection plan.

(3) <https://resorption-bidonvilles.beta.gouv.fr>

Regarding user protection public transport and sustainable mobility (cyclists, etc.)

The prefects ensure that public transport operators, particularly urban ones, and that the transport and mobility organizing authorities take into account measures to protect their users during periods of extreme heatwave.

Regarding protection athletes

Sports federations and clubs are asked to limit their activities during the heatwave period if these activities do not take place in cooled locations or under suitable conditions (e.g., aquatic and nautical activities). Recommendations for athletes not affiliated with a club are included in the general guidelines for protecting the public.

Regarding protection participants in large gatherings and the public at outdoor public venues

Locally, the prefect identifies major sporting events and large gatherings, and works with the organizers to explore options for rescheduling (as a priority) or postponing them. Adjustments to event times are then made to avoid them occurring during the hottest hours of the day if protective measures cannot be implemented.

Similarly, public access conditions to the sites (waiting areas) and public parking on the site are being studied. Access to water and communal cooling facilities for entertainment providers, athletes, and spectators are being adapted, as are the emergency response plans put in place by the organizers.

These approaches to development and adaptation are also conducted with the operators of amusement or leisure parks, zoological parks, etc.

Regarding road traffic and air pollution

The prefect also takes the necessary measures to limit sources of heat and polluting emissions, including traffic restrictions, in the event of a pollution peak coinciding with the heatwave, while ensuring that the necessary exemptions are granted for the proper functioning of the health system and social action for vulnerable people.

The prefect keeps the COGIC informed of the actions implemented, as well as the difficulties encountered, by entering information into the SYNERGI application of the ORSEC portal.

THE NATIONAL SUPPORT MECHANISM AND MANAGEMENT OF THE HEALTH CRISIS

In addition to the measures put in place at the territorial level, the national support and management system for the health management of heat waves⁴ complements them, including in terms of communication.

Introduced by the INTERMINISTERIAL INSTRUCTION No. DGS/VSS2/DGOS/DGCS/DGT/DGSCGC/DGEC/DJEPVA/DS/DGESCO/DIHAL/2021/99 of May 7, 2021 relating to the health management of heat waves in metropolitan France, it aims to analyze the actions implemented in the affected territory(ies) as well as those of the various national actors, to draw up a summary and make reasoned proposals to enable the Minister of Health, in close contact with the Minister of the Interior as well as the other ministers concerned, to make the informed decisions required for the management of the situation.

Finally, he mobilizes the national communication system.

(4) Which replaces the National Heatwave Plan

THE SHEETS OPERATIONAL (O)

SHEET 01**ALERT AND INFORMATION EXCHANGE****EXAMPLE OF AN INFORMATION MESSAGE
ACTORS/FOR ACTION****Subject: Weather alert level/
implementation of the necessary actions to protect the population**

Météo France has classified the department DEPARTMENT NUMBER under weather alert LEVEL OF ALERT, starting from DATE / TIME.

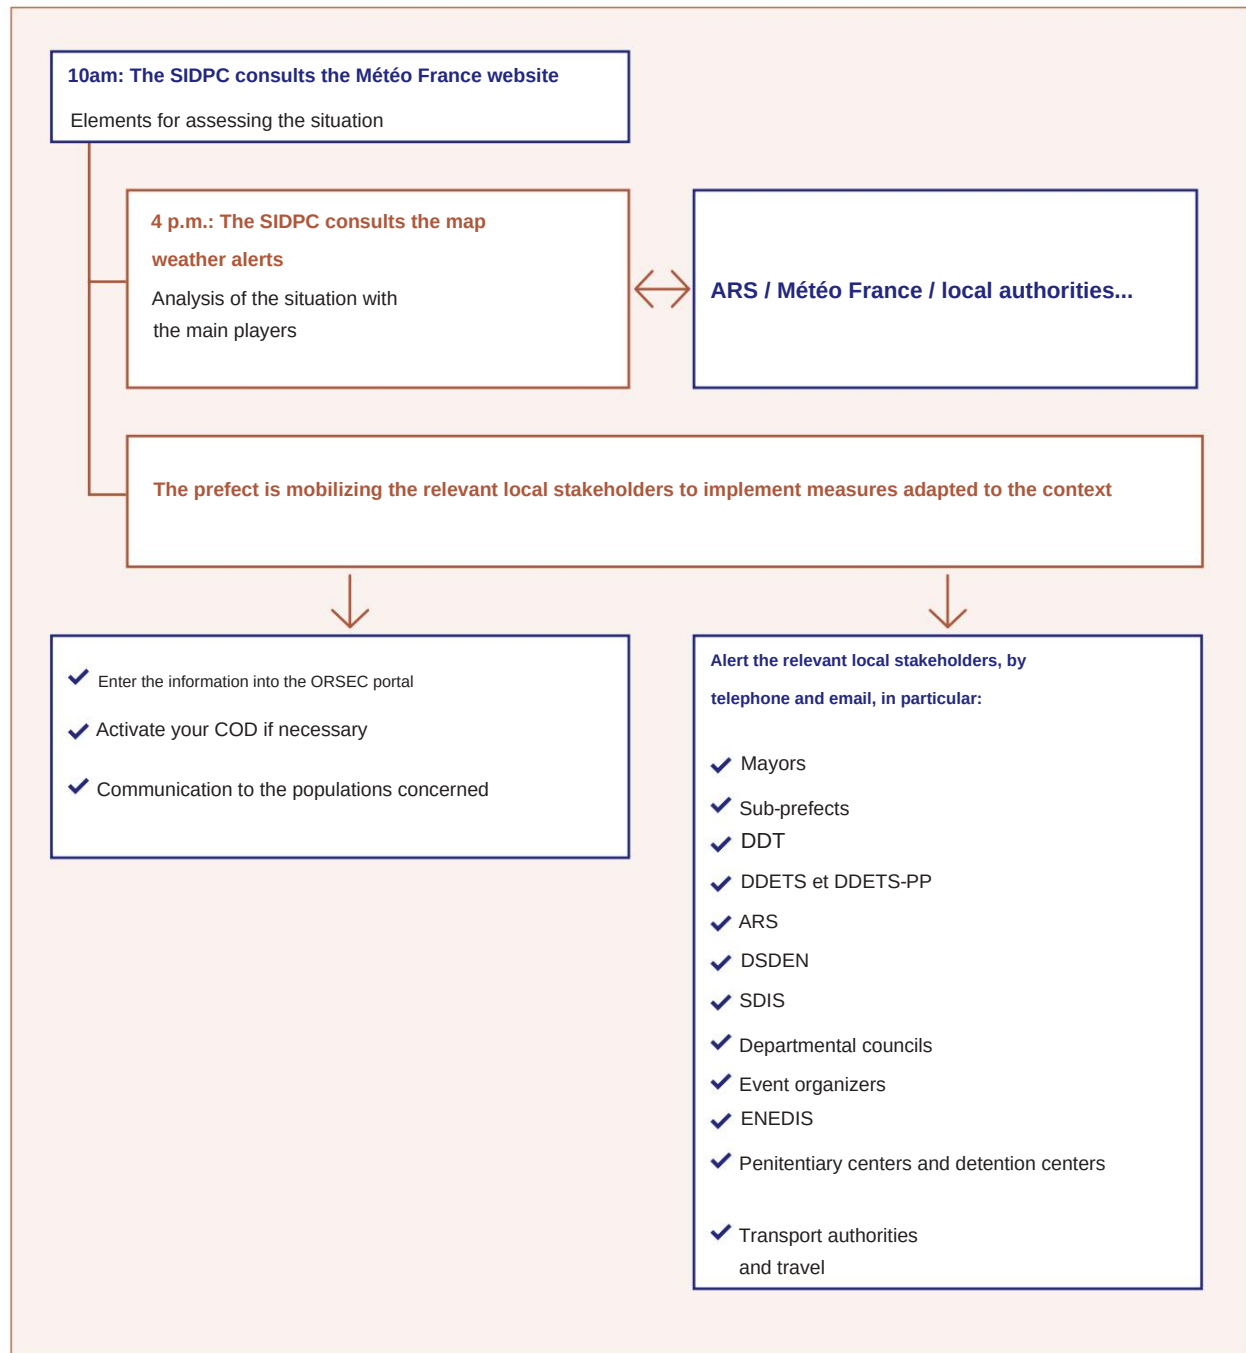

I ask you to implement the measures you deem appropriate to limit the health impacts of this phenomenon and to report them to me.

In particular, it is necessary to:

- ✓ **Strengthen communication measures** by disseminating public health recommendations through all available means on the following websites:
 - <https://www.santepubliquefrance.fr/determinants-de-sante/climat/fortes-chaleurs-canicule/tools>
 - <http://solidarites-sante.gouv.fr/sante-et-environnement/risques-climatiques/>
- ✓ **Implement the actions outlined in the mission statements of local stakeholders**, and in the specific ORSEC (Emergency Response Organization) provisions for managing heatwave health. Please inform me of any difficulties encountered in implementing these measures.

The Prefect

PROCEDURE IN CASE
HEAT WAVE

O2 SHEETS

Job descriptions of local stakeholders

FICHE O2/A

THE MISSIONS OF THE MAIN SERVICES OF THE STATES CONCERNED AND THE ARS

The main missions of the State services involved in the health management of a heat wave, as well as those of the ARS, are indicated in the table below.

DREETS	<u>Vulnerable populations in charge</u> Workers
<u>Prior to the seasonal monitoring period</u> • inventory the human and material resources available <i>at a minimum</i> from June 1st to September 15th, update of directories; • identify vulnerable populations; • identify the actions and measures to be implemented, as well as the modalities of this implementation, during periods of seasonal monitoring and in the event of a heat wave; • remind employers of their obligations to protect the health of their employees; • mobilize occupational health services and occupational physicians; • plan for the implementation of labor inspections as needed; • remind companies that, according to Article R. 4121-1 of the Labour Code, "thermal environments" are intended to be taken into account in the risk assessment process, via the updating of the single risk assessment document (DUER); • invite companies to adapt the organization of work in anticipation of high temperatures and encourage professional organizations to exchange their best practices and to disseminate, by sector of activity, the summaries of feedback from previous crises; • Mobilize occupational health services, through occupational health inspectors, to ensure they are vigilant regarding precautions taken by employers with respect to employees (collective and individual measures), especially those most exposed to heatwave risks, and encourage employers to report every workplace accident; • Plan, at the level of inspection sections, targeted company checks on sectors of activity most affected by heatwave and thermal environment risks, particularly construction and public works.	
<u>During the seasonal monitoring period (from June 1st to September 15th of each year)</u> • disseminate health recommendations; • monitor the situation and its evolution; • to identify the actions implemented and those that could be implemented given the changing context; • report to the prefect of the department, and to his central administration where applicable; • inform companies, professional organizations, as well as trade union organizations of employees; • verify that the companies concerned have indeed adapted the working hours of their employees, taking into account the context; • strengthen inspection and control activities in sensitive sectors or in the event of a work-related accident with the heat.	

Continued from the table on page 34

During a heat wave

- Establish internal management organization; • Identify actions actually implemented and those that could be implemented given the context; • Identify difficulties encountered; • Strengthen the dissemination of health recommendations to the public; • Monitor the situation and its evolution, taking into account the measures implemented; • Report to the prefect of the department, as well as to central government departments where applicable; • Participate in the departmental operations center once activated by the prefect;
- Ensure that occupational health services identify workers likely to be exposed; • Systematically and automatically transmit any serious or fatal workplace accident to the DGT (General Directorate of Labor).

when it occurs, through the usual channels.

Alert lifted

- Disseminate the end of event management to the various establishments and field correspondents concerned;
- stop the dissemination of health recommendations to the populations concerned.

Retex

- Develop a summary of the event management (actions implemented, difficulties encountered, etc.) to destination of the prefect and central administration departments;
- provide feedback to the various establishments and field correspondents, for an improvement of procedures and operating methods, in a continuous improvement approach.

OPERATIONAL SHEETS (O)

DDCS	<u>Vulnerable populations in charge</u> Homeless people, people living in squats and slums, and Travellers
<u>Prior to the seasonal monitoring period</u> • inventory the human and material resources available <i>at a minimum</i> from June 1st to September 15th, update of directories; • identify vulnerable populations; • identify actions and measures to be implemented, as well as the modalities of this implementation, during periods of seasonal monitoring and in the event of a heat wave; • Identify and inform day centers, emergency shelters, social housing, etc.; • Verify the awareness and mobilization of social monitoring services, including mobile teams, outreach patrols, etc. ; • ensure access to drinking water for people living in slums and in traveller accommodation areas.	
<u>During the seasonal monitoring period (from June 1st to September 15th of each year) • disseminate</u> health recommendations; • monitor the situation and its evolution; • to identify actions implemented and those that could be implemented given the evolving context; • to report to the prefect of the department, and to his central administration where applicable; • to inform and mobilize day centers, emergency accommodation centers, social residences, etc.; • to mobilize the SIAO ensuring the orientation of people towards suitable accommodation and the mobile teams.	
<u>During a heat wave • establish the internal management</u> organization; • identify the actions actually implemented and those that could be implemented given the context; • identify the difficulties encountered; • strengthen the dissemination of health recommendations to the population; • monitor the situation and its evolution, taking into account the measures implemented; • report to the prefect of the department, as well as to his central administration if necessary; • participate in the departmental operational center as soon as the prefect has activated it.	
<u>Alert lifted</u> • Disseminate the end of event management to the various establishments and field correspondents concerned; • stop the dissemination of health recommendations to the populations concerned.	
<u>Retex</u> • Develop a summary of the event management (actions implemented, difficulties encountered, etc.) to destination of the prefect and central administration departments; • provide feedback to the various establishments and field correspondents, for an improvement of procedures and operating methods, in a continuous improvement approach.	

DSDEN	<u>Vulnerable populations in charge</u> Schoolchildren, group activities for minors as defined in Article L.227-4 of the French Social Action and Families Code, athletes, minors
<u>Prior to the seasonal monitoring period • inventory</u> the human and material resources available <i>at a minimum</i> from June 1st to September 15th, update of directories; • identify vulnerable populations; • identify the actions and measures to be implemented, as well as the modalities of this implementation, during periods of seasonal monitoring and in the event of a heat wave; • to identify and inform group activities for minors; • identify and inform the organizers of sporting events subject to authorization as well as the CDOS; • ensure that schools are equipped with temperature measurement capabilities in their local ; • ensure that schools are equipped with mobile or fixed cooling capacities the air in the premises; • Prepare the drinking water supply in conjunction with the relevant authorities, and its reinforcement if necessary.	
<u>During the seasonal monitoring period (from June 1st to September 15th of each year)</u> • disseminate health recommendations; • monitor the situation and its evolution; identify the actions implemented and those that could be implemented given the evolving context; • report to the prefect of the department, and to his central administration where applicable; • inform and mobilize group activities for minors; • inform and mobilize the organizers of sporting events subject to authorization as well as the CDOS; • inform and mobilize school principals and parents of students; • call on school doctors and nurses to be vigilant.	
<u>During a heat wave • put in place the internal management organization;</u> • to identify the actions actually implemented and those that could be implemented given the context; • identify the difficulties encountered; • strengthen the dissemination of health recommendations to the population; • monitor the situation and its evolution, taking into account the measures implemented; • report to the prefect of the department, as well as to his central administration where applicable; • participate in the departmental operational center as soon as the prefect has activated it; • monitor the temperature inside school buildings.	
<u>Alert lifted</u> • Disseminate the end of event management to the various establishments and field correspondents concerned; • stop the dissemination of health recommendations to the populations concerned.	
<u>Retex</u> • Develop a summary of the event management (actions implemented, difficulties encountered, etc.) to destination of the prefect and central administration departments; • provide feedback to the various establishments and field correspondents, for an improvement of procedures and operating methods, in a continuous improvement approach.	

OPERATIONAL SHEETS (O)

ARS	<u>Vulnerable populations in charge</u> The entire population, and more specifically those accommodated in health and social care facilities
<u>Prior to the seasonal monitoring period</u> • inventory the human and material resources available at a <i>minimum</i> from June 1st to September 15th, update of directories; • identify vulnerable populations; • identify actions and measures to be implemented, as well as the modalities of this implementation, during periods of seasonal monitoring and in the event of a heat wave; • verify that facilities for the elderly have a situation management plan exceptional sanitary measures operational; • Verify that each healthcare facility has a plan for managing hospital strain and exceptional health situations related to a weather event; • Ensure that the measures provided for in the ORSAN EPI-CLIM plan can effectively be implemented if applicable; • ensure continuity of care in outpatient medicine; • verify the scheduling of hospitalization capacities in public and private health facilities; • prepare the methods for disseminating health recommendations to the population.	
	<u>During the seasonal monitoring period (June 1 to September 15 each year)</u> : • inform healthcare and social care establishments (ESMS) and regional representatives of healthcare professionals; • monitor the daily activity of reception and emergency services, including hospitalization rates; • track changes in bed openings in healthcare establishments, particularly the availability of critical care beds (resuscitation and intensive care) via the ROR (operational directory of resources); • ensure the effectiveness of continuous care in outpatient medicine; • monitor health indicators; • ensure the dissemination of health recommendations to vulnerable populations in particular.
	<u>During a heatwave</u> : • implement internal management organization; • identify actions actually implemented and those that could be implemented given the context; • identify difficulties encountered; • strengthen the dissemination of health recommendations to the population; • monitor the situation and its evolution, taking into account the measures implemented; • inform the prefect of the department, as well as the CORRUS (or the CCS if it is activated); • participate in the departmental operational center as soon as the prefect has activated it; • inform the ESSMS (health and social care establishments) as well as regional representatives of health professionals; • ensure enhanced monitoring of the activity of reception and emergency services, including the hospitalization rate; • monitor the evolution of bed openings in health establishments, and in particular the availability of critical care beds (resuscitation and intensive care) via the ROR (operational directory of resources); • monitor health indicators; • ensure the adaptation of measures implemented by ESMS; • implement if necessary the provisions provided for in the ORSAN EPI-CLIM plan.

Alert lifted

- Disseminate the end of event management to the various establishments and field correspondents concerned;
- stop the dissemination of health recommendations to the populations concerned.

Retex

- prepare a summary of the event management (actions implemented, difficulties encountered, etc.) for CORRUSS or CCS;
- provide feedback to the various establishments and field correspondents, for an improvement of procedures and operating methods, in a continuous improvement approach.

OPERATIONAL SHEETS (O)

O2/B DATA SHEET

THE PREFECT OF THE DEPARTMENT

The main duties of the prefect are as follows:

IN PREPARATION

- ✓ **Identify and list** the relevant local actors, public, private and associative;
- ✓ **Define** the missions of each of these actors, and list their means of intervention;
- ✓ **Keep** your mailing lists up to date;
- ✓ **Establish** information and alert systems with these stakeholders;
- ✓ **Ensure** that each of these actors has put in place an adequate internal organization and, if necessary, verify its operational effectiveness through the performance of exercises.
- ✓ **Develop** a communication plan tailored to each audience, specifically aimed at disseminating recommendations
sanitary facilities;
- ✓ **Prepare** the arrangements for mobilizing local media;
- ✓ **Ensure** that the information is up to date
available to the population.

- ✓ **Monitor** information and difficulties re-mounted by these actors;
- ✓ **Ensure** the dissemination of health recommendations, particularly to vulnerable populations.

IN A MANAGEMENT SITUATION

- ✓ **Inform** and mobilize the relevant local stakeholders;
- ✓ **Activate** your COD if necessary and according to a monitoring frequency adapted to the kinetics of the phenomenon (for example a single daily situation point, and ensures the presence of a representative of each of the actors concerned);
- ✓ **Ensures** and coordinates implementation measures to protect the populations concerned, in particular vulnerable populations;
- ✓ **Implement** appropriate communication with the populations concerned, and coordinate the messages disseminated by local authorities;
- ✓ **Monitor** the evolution of the situation (reporting of indicators and actions taken by stakeholders);
- ✓ **Take** all necessary steps to mobilize the resources needed and appropriate according to the characteristics of the heat wave;
- ✓ **To be able** to adapt the holding of certain large gatherings, or to postpone them, or even cancel them;

DURING WATCHTIME SEASONAL (FROM JUNE 1ST AS OF SEPTEMBER 15 (OF EACH YEAR)

- ✓ **Inform** the relevant local stakeholders of triggering of the seasonal standby period;
- ✓ **mobilizes them and reminds them** of their responsibilities, particularly during a meeting with all of these actors;
- ✓ **Monitor** the evolution of the weather alert system, and inform local stakeholders;

- ✓ **Inform** the COGIC of the actions taken work and any potential difficulties encountered countries;

In the event of an extreme heatwave corresponding to the red level of weather alert:

- ✓ **Facilitating** access to establishments public facilities whose premises are being refurbished: extended opening hours, free access, requisitioning, organization of transport;
- ✓ **Facilitating** access to swimming pools and bathing areas: extending opening hours, free access, requisitioning, requisitioning, organizing transport;
- ✓ **Arrange** for temporary accommodation in air-conditioned locations;
- ✓ **Ensure** that cooling measures are put in place in the city, public transport, and establishments open to the public: misting systems, spray ramps, by the relevant stakeholders;
- ✓ **Ensure** the mobilization of social monitoring systems (day centers, outreach patrols, etc.) and the SIAO;
- ✓ **Ensure** that individual cooling devices are distributed: fans, caps, water bottles, by the actors concerned;
- ✓ Temporarily **prohibits** all large gatherings, including sporting events, school outings or outings from summer camps;
- ✓ Temporarily **prohibit** the commencement of construction and major works;
- ✓ **Close** public services during the hottest hours of the day, if the premises are not air-conditioned, or adjust their opening hours;
- ✓ **Regulating** vehicle traffic during the hottest hours of the day;

- ✓ **Making** any decision or rendering any ar-funding necessary to maintain the activities of sectors essential to the healthcare of individuals, in support of the ORSAN system managed by the ARS. This concerns the continuity of primary care, the continuity of the public hospital service, cooperation between the hospital and medico-social sectors, the availability and capacities of medical transport and funeral operators;

- ✓ **Ensure**, where necessary, that funeral operators manage mass deaths appropriately, particularly in terms of capacity to receive and preserve the bodies.

corps.

ALERT LIFTED

- ✓ **Inform** local stakeholders of the end of event management;
- ✓ **Supervise** the lifting of the actions;
- ✓ **Inform** the public;
- ✓ **End** COD activation;
- ✓ **Inform** the COGIC of the end of the departmental alert "heatwave" or "extreme heatwave".

RETEX

- ✓ **Conduct** a feedback session with all local stakeholders to identify any difficulties encountered, and provide answers for the purpose of continuous improvement of the system;
- ✓ **Revise** your plan if necessary.

OPERATIONAL SHEETS (O)

O2/C SHEET

THE MAYORS

The mayor's main responsibilities are as follows:

IN PREPARATION

- ✓ **Check** the operationality of its monitoring and management system (tools, procedures, on-call duty, directory, etc.);
- ✓ **Ensure** that its system for receiving alerts from the prefecture operates 7 days a week;
- ✓ **Prepare** to raise awareness among its constituents, particularly isolated elderly people and people with disabilities, of the possibility of registering to receive support by registering on the register of vulnerable people living at home (awareness campaign possible before the seasonal monitoring, from May onwards);
- ✓ **Locate** green spaces, fountains, drinking water points, collective premises and any other establishments open to the public with air-conditioned or cooled rooms or spaces that can accommodate vulnerable people;
- ✓ **To ensure** the preparation and availability during the summer of its own services, in particular those intervening with vulnerable people;
- ✓ **Organize** the monitoring system for vulnerable people at home;
- ✓ **Check** the procedures for setting up a municipal monitoring unit;
- ✓ **Verify** the operationality of the provisions of the municipal safeguard plan, particularly with regard to schools;

- ✓ **Anticipate** the possibility of allowing adjustments to the schedules of construction sites, particularly in the construction industry, on public roads;
- ✓ **Prepare** the procedures for using Civic Service volunteers in the field of health and solidarity (information for the general public, awareness-raising, contribution to the action of structures working within the framework of urban policy such as city health workshops...).

DURING THE PERIOD

SEASONAL WATCH

- ✓ **Inform** its services of the entry into the seasonal monitoring period, and mobilize them;
- ✓ **Inform** and communicate with its constituents, particularly isolated elderly people and people with disabilities, about the possibility of registering to receive support;
- ✓ **Process** applications for registration on the register of vulnerable people living at home, and ensure that it is kept up to date;
- ✓ **To make** available to the population, in particular vulnerable populations, the locations of green spaces, fountains, drinking water points, collective premises with air-conditioned or cooled rooms (document, telephone contact, smartphone application, interactive map on the municipality's website, illuminated sign...);
- ✓ **Ensure** the dissemination of recommendations health donations, particularly to vulnerable populations.

IN A MANAGEMENT SITUATION

✓ Inform and alert:

- Its own services;
 - The structures and establishments under its jurisdiction, including municipal crèches, facilities for young children and minors under its jurisdiction, municipal social action centers (CCAS), as well as primary schools ;
 - Municipal health centers (CSM);
- ✓ **Set up** the municipal monitoring unit as needed, and can activate its municipal emergency plan (health management component of heat waves);
- ✓ **Disseminating** health recommendations by any means (leaflets, illuminated signs, posters...), can activate a freephone number where appropriate;
- ✓ **Contacting** vulnerable people who are isolated (people in situations of dependency, elderly, with reduced mobility or disabled...);
- ✓ **Being able** to organize transport for vulnerable people living in poorly adapted accommodations for high temperatures, towards cool places before the hottest part of the day;
- ✓ **To make** available to the population, particularly vulnerable populations, the locations of green spaces, fountains, drinking water points, collective premises with air-conditioned or cooled rooms (smartphone application, interactive map on the municipality's website, illuminated signs, etc.)
- ✓ **Call upon** the local branches of national associations and local associations, and the volunteers of the civic service, as needed;
- ✓ **Ensure** specific follow-up of deaths on the commune ;

- ✓ **Keep** the prefect informed of the actions implemented and any difficulties encountered;

- ✓ **The power** to close primary schools if the conditions for welcoming children are not

not satisfactory. He can therefore rely on the national decision-making support sheet made available to him;

- ✓ **To be able** to postpone or modify, or even prohibit, any event, particularly sporting events, or large gathering in his municipality of which he is aware;
- ✓ **To be able to** exceptionally and temporarily adjust the schedules of construction sites, particularly in the construction and public works sector, on public roads.

ALERT LIFTED

- ✓ **Receive** information about the end of the heat wave and the lifting of measures;
- ✓ **Disseminate** information to services, organizations, structures, partners and local stakeholders mobilized via the usual alert methods put in place;
- ✓ **Communicating** with the population, especially vulnerable populations;
- ✓ **Prepare** a summary of the municipal management of the event and the measures taken, and send it to the prefect.

RETEX

- ✓ **To proceed** with the analysis of the management of the event by its services, to draw the consequences in order to make the necessary improvements to the municipal system.

O2/D SHEET

THE DEPARTMENTAL COUNCIL

The main missions of the Departmental Council are as follows:

IN PREPARATION

- ✓ **To ensure** the preparation of its own services, and of the structures under its jurisdiction (maternal and child protection services, departmental crèches, etc.);
- ✓ **Check** the operability of its monitoring and management system (tools, procedures, on-call duty, directory, etc.);
- ✓ **Ensure** the implementation of the provisions of the departmental plan in favour of isolated elderly people;
- ✓ **Identify** the structures under its jurisdiction that have air-conditioned or cooled rooms and can accommodate vulnerable people.

- ✓ **Inform** the establishments and structures placed under his responsibility;
- ✓ **Relay** the recommendations issued by the ARS to its establishments and public;
- ✓ **Mobilizing** medical and social teams to support elderly and disabled people
- ✓ **Participate** in the COD when it is activated by the prefect;
- ✓ **Inform** the prefect of the evolution of its indicators, as well as of any unusual activity or event.

DURING THE PERIOD
SEASONAL WATCH

- ✓ **Inform** its services of the entry into the seasonal monitoring period, and mobilize them;
- ✓ **Participate** in the dissemination of health recommendations, particularly to vulnerable populations;
- ✓ **Check** the weather forecast regularly to anticipate the implementation of measures.

ALERT LIFTED

- ✓ **Receive** information about the end of the heat wave and the lifting of measures;
- ✓ **Disseminate** information to services, organizations, structures, partners and local stakeholders mobilized via the usual alert methods put in place;
- ✓ **Communicating** with the population, especially vulnerable populations;
- ✓ **Prepare** a summary of the municipal management of the event and the measures taken, and send it to the prefect.

IN A MANAGEMENT SITUATION

- ✓ **Mobilizing** its services as close as possible to the population;
- ✓ **Strengthen** its monitoring and management system;

RETEX

- ✓ **To proceed** with the analysis of the management of the event by its services, to draw the consequences in order to make the necessary improvements to the departmental system.

FICHE O2/E**HEALTHCARE FACILITY MANAGERS**

The main missions are as follows:

IN PREPARATION

- ✓ **Ensure** the development and updating of the provisions of the plan for managing exceptional health situations (white plan) of his establishment, in line with the ORSAN EPI-CLIM plan developed by the ARS.

- ✓ **Organize** early exits, or even cancellations of programs, as needed;
- ✓ **Monitor** the number of deaths, particularly deaths from heat-related illnesses.

DURING THE PERIOD**SEASONAL WATCH**

- ✓ **Inform** your services of the entry into seasonal standby;
- ✓ **To ensure** the effectiveness of the measures planned within the framework of its plan, particularly with regard to the hospital crisis unit;
- ✓ **Disseminate** health recommendations with the populations being hosted;
- ✓ **Check** weather forecasts regularly to anticipate the implementation of measures.

ALERT LIFTED

- ✓ **Receive** information about the end of the heat wave, and disseminate it to its services;
- ✓ **Prepare** a summary of the event management and the measures taken, and transmit it to the ARS.

RETEX

- ✓ **To proceed** with the analysis of the management of the event by its services, to draw the consequences in order to make the necessary improvements to the plan for managing exceptional health situations (white plan).

IN A MANAGEMENT SITUATION

- ✓ **Implement** the provisions provided for in its plan for managing exceptional health situations, in a gradual manner and adapted to the situation;
- ✓ **Keep** the Regional Health Agency (ARS) informed of the measures put in place work, and the evolution of the situation;
- ✓ **Monitoring** activity indicators, particularly scheduled activity, verifies the actual availability of beds;

FICHE O2/F

SCHOOL MANAGERS SOCIAL AND MEDICAL-SOCIAL

Social and medico-social establishments may face unusual or serious events. It is therefore essential to guarantee the continuity and quality of care by mobilizing their resources as effectively as possible, in a manner adapted to the needs of the people they serve and the scale of the situation.

In this context, the main missions of a manager of a medical-social establishment for the preparation and management of the occurrence of a heat wave are as follows:

IN PREPARATION

- ✓ **Ensure** the development and updating of an internal heatwave management plan (organizational procedures for the establishment in the event of a heatwave);
- ✓ **Appoint** a person responsible for preparation and management;
- ✓ **Ensure** that staff are trained and made aware of the health risks associated with exposure to heat;
- ✓ **Ensure** that measures are prepared that can be put in place in the event of a heat wave (implementation methods, necessary resources, etc.)

Specifically, the following measures can be implemented:

- ✓ **Determine** the media, channels and methods for disseminating health recommendations to residents and their families;
- ✓ **Limit** the increase in room temperature by closing shutters and curtains;
- ✓ **Avoid** exposure to heat by refraining from going out during the hottest hours of the day, and by spending several hours a day in a cool or even air-conditioned place, wearing light-colored, lightweight clothing;

- ✓ **Avoid** activities that require significant energy expenditure;
- ✓ **Monitor** the water consumption of each resident;
- ✓ **To adapt** the menus (fresh and light dishes) for residents;
- ✓ **Ensure** the compatibility of care protocols, and adapt them as needed;
- ✓ **Ensure** the operability of available material resources (fixed air cooling system, cooled premises or rooms, autonomous mobile devices, etc.);
- ✓ **To study and prepare** possible day or temporary accommodation options for vulnerable people who are not residents of the facility.

Regarding accommodation facilities for the elderly (EHPAD and EHPA: independent living residences)

Pursuant to decree no. 2005-768 of 7 July 2005 relating to the minimum technical conditions for the operation of establishments providing accommodation for the elderly, the head of the establishment is responsible in a crisis situation.

In this regard:

- ✓ **Ensure** the development and updating of the blue plan, in line with the OR- plan SAN EPI-CLIM developed by the ARS;
- ✓ **Disseminate** good practice recommendations preventative practices for staff in case of a heatwave;
- ✓ **Develop** an information protocol for residents and their families in the event of activity elevation of the blue plan;
- ✓ **Ensure** that the emergency liaison file (DLU) is in place for each resident;
- ✓ **Entering into** an agreement with an established company local health services, setting out the modalities of cooperation and exchange on good practices contributing to preventing the effects of a heat wave on health and avoiding hospitalizations.

- ✓ **Keep** the DDCS and/or the ARS informed of the measures implemented, and of the evolution of the situation;
- ✓ **Inform** the DDCS and/or the ARS in case of an unusual situation, including a possible significant increase in transfers to emergency services and/or the activation of the blue plan and/or the reinforcement of personnel.

ALERT LIFTED

- ✓ **Receive** information about the end of the heat wave, and disseminate it to its services;
- ✓ **Prepare** a summary of the event management and the measures taken, and transmit it to the DDCS and/or the ARS.

DURING THE PERIOD

SEASONAL WATCH

- ✓ **Inform** your services of the entry into seasonal standby;
- ✓ **To ensure** the effectiveness of the measures planned within the framework of its internal management plan;
- ✓ **Disseminate** health recommendations to the populations being hosted;
- ✓ Regularly **consult** weather forecasts to anticipate the implementation of measures.

RETEX

- ✓ **To proceed** with the analysis of the management of the event by its services, to draw the consequences in order to make the necessary improvements to the internal heat wave management plan (blue plan for EHPA and EHPAD).

IN A MANAGEMENT SITUATION

- ✓ **Inform** your services and staff of the arrival of a heat wave;
- ✓ **Implement** the provisions outlined in its internal heatwave management plan, in a gradual manner and adapted to the situation;

O2/G DATA SHEET

SUPPORT SERVICES AND HOME SUPPORT (SAAD)

The main missions are as follows:

- ✓ Home-based services (such as SAAD, SSIAD, SPASAD) have a central support system, particularly for dependent and isolated elderly people, people with disabilities, and vulnerable families.
- ✓ Home nursing care services (SSIAD) provide care in the homes of elderly people, people with disabilities and people under 60 years of age suffering from chronic illnesses or certain types of conditions.

These services make it possible to provide benefits that promote maintenance at the homes of vulnerable people in their care:

- ✓ They help with the performance of essential life activities: medical monitoring, nursing procedures (injections, dressings, infusions...);
- ✓ They help to prevent loss of independence, limit disabilities and combat isolation.

IN PREPARATION

- ✓ **Train** their staff in risk prevention and recognition of warning signs in order to quickly identify the need for reporting to healthcare professionals and/or attending physician;
- ✓ **Ensure** the drafting of a crisis management procedure;
- ✓ **Establish** a "monitoring network" by home care and support staff, for comprehensive and coherent care and to combat isolation;
- ✓ **Participate** in identifying vulnerable people in their care;
- ✓ **Disseminate** advice on how to protect oneself from the effects of heat to those being helped;
- ✓ **Provide** information on reception areas air-conditioned or cooled and encourage people to join them.

DURING THE PERIOD

SEASONAL WATCH

- ✓ Regularly **consult** weather forecasts to anticipate the implementation of measures.

IN A MANAGEMENT SITUATION

- ✓ **Monitor** their indicators transmitted to the departmental or regional unions which forward them to the ARS;
- ✓ **To ensure** the planning of the mobilization of all staff, in particular with more frequent and late visits or telephone contacts and the return of some patients from hospital;
- ✓ **Check** that the person has access to hydration and refreshment supplies nearby and in working order;

- ✓ **Organize** the monitoring, in coordination with other professionals and relatives, of daily water consumption and food intake and weight monitoring;

- ✓ **To ensure** that patients whose health condition requires it are directed towards the appropriate care pathway in conjunction with their attending physician and close family/friends.
sun ;

- ✓ **Organize** travel and outings to cooled places/premises for people whose homes are exposed to heat and who do not have sufficient means of cooling.

ALERT LIFTED

- ✓ **Receive** information about the end of the heat wave, and disseminate it to its services;

- ✓ **Prepare** a summary of the event management and the measures taken, and transmit it to the DDCS and/or the ARS.

RETEX

- ✓ **To proceed** with the analysis of the management of the event by its services, to draw the consequences in order to make the necessary improvements to the internal heat wave management plan.

O2/H SHEET

MANAGERS OF RECEPTION FACILITIES OF MINORS, INCLUDING EARLY CHILDHOOD

In general, in childcare facilities and early childhood establishments and structures, it is necessary to check in advance whether a specific arrangement of a cooler room is feasible, and whether the devices and equipment (blinds, shutters, cooling systems, refrigerator, freezer, etc.) are working.

On the other hand, it is also necessary to verify that professionals are aware of prevention measures and the detection of clinical warning signs of heat exposure.

The establishments concerned include, in particular, the following: reception facilities children under 6 years of age, maternal centers and group facilities for minors mentioned in article L. 227-4 of the social action and families code (with or without accommodation).

The main missions are as follows:

IN PREPARATION

- ✓ **Ensure** the development and updating of an internal heatwave management plan;

- ✓ **Appoint** a person responsible for preparation and management.

Preparing establishments involves adapting their architecture and materials, as well as adapting their organization and operation:

Architecture and materials

- ✓ **Check** the operation of blinds, shutters, cooling or air conditioning systems, or plan for their installation;
- ✓ **Ensure** that you have the necessary equipment to protect children from the heat (mistifiers, fans¹ in particular);
- ✓ **Check** the functionality of the drinking water supply network and the operation of the showers.

- ✓ **Have** a means of checking thermal comfort inside the premises and in the different living areas (rest, activities, toilets); have at least one thermometer per room;

- ✓ **To have** a refreshed room;

- ✓ **Ensure** the refrigerator is functioning correctly manager and freezer.

Organization and operation

- ✓ **Raising awareness** among professionals in contact with young children about the risks incurred during a heat wave, the identification of disorders that may occur, and the prevention and reporting measures to be implemented;
- ✓ **Adapt** activities and outings (times to the coolest temperatures and favour shaded, cool places);
- ✓ **Ensure** the preparation of water supplies and the strengthening of distribution;

(1) Fans only increase cooling if the skin is previously moistened.

- ✓ **Ensure** proper food storage conditions and adherence to the cold chain.

DURING THE PERIOD

SEASONAL WATCH

- ✓ Regularly **consult** weather forecasts to anticipate the implementation of measures.

IN A MANAGEMENT SITUATION

- ✓ **Protecting** facades and windows exposed to the sun: closing shutters and blinds, making surfaces opaque or reflective);
- ✓ **Close** the shutters and curtains on the facades most exposed to the sun throughout the day (especially if the outside temperature is higher than the inside temperature);
- ✓ **Check** the room temperature and have a backup plan in a cooler location;
- ✓ **Keep out** of the shade of children - avoid prolonged exposure to the sun.
- ✓ **Adapt** activities and outings to the outdoors (times at the coolest temperatures) and favour shaded, cool places;
- ✓ **Adapt** the activities (bathtubs, water games, paddling pools, etc.);
- ✓ **Limit / prohibit** intense exertion, sporting activities;
- ✓ **Refreshing** children and infants:
 - use of misting sprays, protection of the body with light-colored clothing to avoid direct sun exposure of the skin and scalp;
- ✓ **Application** of sunscreens;
- ✓ **Watering** the courtyards or playgrounds;
- ✓ **Place** young children in air-conditioned dormitories;

- ✓ **Encourage** children to drink regularly (every hour), from a glass or bottle;

- ✓ **Adapt** menus, favour fresh fruit (watermelon, melon, strawberries, peaches) or compotes, and green vegetables (zucchini and cucumbers), offer yogurts or soft cheeses unless contraindicated;

- ✓ **Raising awareness** among parents in the evening when they come to pick up their children.

ALERT LIFTED

- ✓ **Receive** information about the end of the heat wave, and disseminate it to its services;
- ✓ **Prepare** a summary of the event management and the measures taken, and transmit it to the DSDEN.

RETEX

- ✓ **To proceed** with the analysis of the management of the event by its services, to draw the consequences in order to make the necessary improvements to the internal heat wave management plan.

O2/I DATA SHEET

ASSOCIATIONS, INCLUDING ASSOCIATIONS APPROVED CIVIL SECURITY ORGANIZATIONS (AASC)

They support local authorities on the ground in assisting the elderly, people with disabilities, the homeless or those in precarious situations, and all vulnerable individuals. National associations are aware of the need to mobilize their networks, particularly volunteers, whose role and missions are essential in disseminating information and protection efforts for vulnerable people.

- ✓ Approved civil security associations (AASC);
- ✓ Volunteer visitor networks;
- ✓ Little Brothers of the Poor, France Volunteering...

IN PREPARATION

- ✓ **Update** crisis management procedures;
 - ✓ **Identify and gather** specific resources according to the event;
 - ✓ **Calling** upon young people carrying out Civic Service missions in the field of health and solidarity (providing information to the general public, raising awareness, contributing to the action of tra- structures)
- valiant within the framework of urban policy such as city health workshops...;
- ✓ **Contribute** to the identification of vulnerable people by encouraging them to register with the municipalities or CCAS (responsible for ensuring the census of isolated people), according to local needs.

DURING THE PERIOD

SEASONAL WATCH

- ✓ Regularly **consult** weather forecasts to anticipate the implementation of measures.

IN A MANAGEMENT SITUATION

According to their prerogatives, the associations:

- ✓ **Monitor** their indicators and inform the prefect of the execution of their missions, as well as any abnormal activity;
- ✓ **Provide** material resources and teams according to local needs and in particular according to the instructions of the prefect / COD;
- ✓ **To ensure** active monitoring of vulnerable people: elderly people accompanied and those reported by the municipalities, people on the street, living in squats and slums, etc.;
- ✓ **Helping** to disseminate the recommendations sanitary facilities, constitutes a reinforcement of local telephone reception units;
- ✓ **Strengthen** municipal services for telephone contact, home visits, and support for vulnerable elderly and disabled people at home;
- ✓ **Participate** in the monitoring and assistance of homeless people (outreach patrols);

- ✓ **Helping** to open refreshed public spaces;
- ✓ **Strengthen** emergency reception services in hospitals;
- ✓ **Reinforce** the teams of the SAMU or the fire brigade;
- ✓ **Reinforce** staffing in facilities for the elderly, home care services, or emergency social accommodation centers, for the transport of

people ;
- ✓ **Carry out** prevention actions among the population, through emergency response systems at sporting or cultural events;
- ✓ **To help** ensure water distribution in densely populated areas in conjunction with local authorities;
- ✓ **Inform** homeless people about available drinking water points;
- ✓ **Helping** with water distribution on the cars routes.

ALERT LIFTED

- ✓ **To be** informed of the evolution and end of the heat wave and to disseminate the information within their own organization;

RETEX

- ✓ **They** analyze the management of the event and draw conclusions to make the necessary improvements to their systems.

O2/J SHEET

SPORTING EVENT ORGANIZERS

IN PREPARATION

They take into account the risk of heat exposure in the organization of the event.
ment :

- ✓ **Establish** an operational protocol in case of a heat wave:
 - determine the conditions of cancellation (or the postponement) of the event in case of extreme heat,
 - Ensure that those participating in the event and the members of the supervising team have access to and are aware of the prevention measures,
 - ensure the availability of stocks of chilled drinks,
 - to implement measures to prevent heat-related illness,
 - train the management team in recognizing the warning signs that suggest heatstroke and how to manage it.
- ✓ **Ensure** that this protocol is accessible, known and understood by everyone from the organizing team;
- ✓ **Ensure** that the staff numbers required to carry out this protocol will be sufficient during the event;
- ✓ **Ensure** that the equipment necessary for the re-implementation of this protocol will be available and operational during the summer period;
- ✓ **Display** recommendations for athletes and the public on appropriate signs;
- ✓ **Control** the arrangements for making cold drinks available;
- ✓ **Study** the sunlight exposure of the structure and the possibilities of creating shaded areas;

- ✓ **Study** and verify the functionality of the changing rooms and showers;
- ✓ **Install** thermometers in the structures.

DURING THE PERIOD

SEASONAL WATCH

- ✓ Regularly **consult** weather forecasts to anticipate the implementation of measures.

IN A MANAGEMENT SITUATION

- ✓ **Implement** the provisions of the protocol;
- ✓ **To ensure** the dissemination of preventative information to the public and participants during sporting events;
- ✓ **Inform** the medical and paramedical staff of the competitors;
- ✓ **Track and report** all events abnormal to the prefect of the department.

ALERT LIFTED

- ✓ **To be informed** of the evolution and end of the heat wave and to disseminate the information within their own organization.

RETEX

- ✓ **They** analyze the management of the event and draw conclusions to make the necessary improvements to their systems.

O2/K DATA SHEET

EMPLOYERS

In accordance with the labor code, "the employer is required to take the necessary measures to ensure the safety and protect the physical and mental health of all workers."

In this context, every employer must be aware of the risks that extreme heat can have on their employees: a risk of exhaustion and/or dehydration, and a risk of heat stroke.

This risk must be taken into consideration in the context of the risk assessment (updating of the single document, DUER) and result in an action plan providing for possible corrective measures in application of decree no. 2008-1382 of 19 December 2008, relating to the protection of workers exposed to particular climatic conditions (article R. 4121-1 of the labor code).

The main missions are:

IN PREPARATION

- ✓ **Ensure** the development and updating of the single risk assessment document and, where applicable, an internal heatwave management plan;
- ✓ **Appoint** a person responsible for preparation and management;
- ✓ **Identify** the workstations most exposed to a significant heat source;
- ✓ **Inform** employees about the risks, prevention methods, and signs and symptoms of heatstroke;
- ✓ **Provide** employees with ventilated premises, fresh drinking water, free of charge (article R. 4225-2 of the labor code);
- ✓ **Check** that the relevant technical adaptations (blinds, ventilation, etc.) that limit the effects of heat have

have been put in place and are functional: in enclosed premises where employees are where people are required to stay, the air must be renewed (article R. 4222-1 of the labor code).

DURING THE PERIOD

SEASONAL WATCH

- ✓ **Check** the weather forecast regularly in order to anticipate or even reschedule the activity, especially if it is to take place outdoors and involves physical exertion.

IN A MANAGEMENT SITUATION

- ✓ **Put** in place an organization and appropriate means (measures to limit these exposures (e.g. staggered hours, more frequent breaks...);
- ✓ **Provide** employees with "fresh drinking water" (article R. 4225-2 of the labor code);
- ✓ **Adjusting** working hours, increasing the frequency of breaks, postponing physically demanding tasks, and informing employees about...

risks involved (fatigue, headaches, dizziness, cramps... which can lead to serious consequences such as heatstroke or dehydration);

OPERATIONAL SHEETS (O)

- ✓ **Ensure** that the wearing of personal protective equipment is compatible with high temperatures;
- ✓ **Proceed** to check the renewal form.
air circulation in enclosed spaces where the staff are required to stay (article R. 4222-1 of the labor code);
- ✓ **Report** any abnormal situation
potentially linked to heat in the labor inspection system;
- ✓ **Monitor** the temperature of the premises;
- ✓ **Provide** means of protection and/or cooling: fans, misters, humidifiers;
- ✓ **Adjust** working hours as much as possible according to the hottest hours, and prioritize teleworking when possible;
- ✓ **Organize** additional or longer breaks during the hottest hours.

Special provisions for outdoor workers, including those in the construction industry:
- ✓ **Arrange** workstations in such a way that workers are protected, as far as possible (Article R. 4225-1 of the Labour Code);
- ✓ **Provide** a space that allows workers to be accommodated in conditions that preserve their safety and health. If such a space is not available, site arrangements are necessary to allow the protection of workers' health and safety under equivalent conditions (Article R. 4534-142-1 of the Labour Code);
- ✓ **Provide** workers with at least 3 litres of water per person per day (article R. 4534-143 of the labour code).

ALERT LIFTED

- ✓ **To be informed** of the development and end of the heat wave and to disseminate the information within their own organization;
- ✓ **Report** any event, any abnormal change in their indicators.

RETEX

- ✓ **Analyze** the event management and draw conclusions to make the necessary improvements to its system.

O2/L SHEET

MANAGERS OF ACCOMMODATION FACILITIES (CHRS, CADA, ETC.)

The main responsibilities of a manager of an accommodation facility in preparing for and managing the occurrence of a heatwave are as follows:

IN PREPARATION

- ✓ **Ensure** the development and updating of an internal heatwave management plan (implementation methods for measures, necessary resources, etc.);
- ✓ **Appoint** a person responsible for preparation and management;
- ✓ **Ensure** the training and awareness of its staff in risk prevention and recognition of warning signs.

In concrete terms, the internal management plan must enable the following:

- ✓ **Determine** the media, channels and methods for disseminating the recommendations health and safety of the people accommodated, while taking into account specific issues (addictions, etc.);
- ✓ **Ensure** the operability of available material resources (fixed air cooling system, cooled premises or rooms, autonomous mobile devices, easy access to bathrooms during the day, etc.);
- ✓ **Monitor** the hydration of the people being housed;
- ✓ **To study** and prepare possible day or temporary accommodation options, as well as the accommodation of vulnerable people not housed in the structure for a few hours;
- ✓ **Consider** temporarily closing off certain rooms in the building that are highly exposed to heat. Consequently, organize the redeployment within the building of the people who would otherwise be housed there.

DURING THE PERIOD

SEASONAL WATCH

- ✓ **Inform** your services of the entry into seasonal standby;
- ✓ **To ensure** the effectiveness of the measures planned within the framework of its internal management plan;
- ✓ **Disseminate** health recommendations with the people being housed;
- ✓ **Monitor** the temperature inside the establishment.

IN A MANAGEMENT SITUATION

- ✓ **Inform** your services and staff of the arrival of a heat wave;
- ✓ **Implement** the provisions provided for in its internal heatwave management system, in a gradual manner and adapted to the situation;
- ✓ **Keep** the DDCS informed of the measures put in place implementation, and the evolution of the situation;
- ✓ **Inform** the DDCS in case of unusual situation, including a possible significant increase in transfers to emergency services, a reinforcement in staff, etc.

OPERATIONAL SHEETS (O)

ALERT LIFTED

- ✓ **Receive** information about the end of the heat wave, and disseminate it to its services;

RETEX

- ✓ **To proceed** with the analysis of the management of the event by its services, to draw the consequences in order to make the necessary improvements to its internal heat wave management system.

O3 SHEETS

Decision-making aid sheets in the event
of an extreme heatwave

O3/M SHEET

DECISION-MAKING AID SHEET: PRIMARY SCHOOL CLOSURES

Red alert – extreme heatwave | Recipients: *directors and heads of establishments, IEN, mayors, IA-DASEN, prefects.*

CONTEXT

Children represent a population vulnerable to heat, *especially* when it becomes extreme.

Placing a department under red weather alert for heatwave should lead local decision-makers to assess the situation and the opportunity to temporarily close classes and childcare facilities, particularly in primary schools.

The purpose of this document is to provide these local decision-makers (mayors, IEN, IA-DASEN and prefects) with elements of assessment enabling them to objectify their decisions relating to the temporary closure of primary schools.

A guide to good practices presenting pragmatic and feasible actions by local authorities without massive financial investment and aimed at reducing the potential impact of heat waves will be published in May 2022.

DECISION-MAKING SUPPORT ELEMENTS

The possible decision to close a school is based on the assessment of the conditions for welcoming children by the district inspectors.

These assessment criteria will be subject to consultation with local authorities.

They could be of two kinds: structural and cyclical.

Specific considerations at school (structural data)

✓ **Presence** of devices for obscuring or protecting facades;

✓ **Presence of sufficient fixed or mobile air conditioning units** in good working order.

walking, or ventilation systems allowing for nighttime air renewal;

✓ **Presence of shaded areas** within the school grounds;

✓ **Access to drinking water points** or provision of bottled water available;

✓ **The number of days** in red heatwave.

Contextual elements (current economic data)

✓ **Presence of wind** ;

✓ **Specific actions** aimed at reducing the temperature of buildings (watering for example).

ASSESSMENT PROCESS AND DECISION

National education inspectors, in conjunction with mayors, are responsible for assessing the local situation of each school located in the

departments affected by a red weather alert to assess the conditions for welcoming children, relying in particular on decision-making support elements

as outlined above. They record their assessment in a note or report which they immediately send to the IA-DASEN.

Therefore, it appears from the note or report drawn up by the school inspector that the conditions for welcoming children in the school

are not satisfactory, local decision-makers make the decision to temporarily close the school.

O3/N SHEET

DECISION-MAKING GUIDELINES: POSTPONEMENT, CANCELLATION OR A BAN ON SPORTING EVENTS

Red alert – extreme heatwave | Recipients: *organizers of sporting events, mayors, prefects.*

CONTEXT

Placing a department under red weather alert for heatwaves should lead local decision-makers to assess the situation and the opportunity to postpone or temporarily cancel sporting events, in the event that the implementation of actions aimed at reducing the impact of heatwaves proves insufficient.

The purpose of this document is to provide these local decision-makers (organizers of sporting events, prefects, municipalities) with elements of assessment enabling them to objectify their decisions regarding the postponement or temporary cancellation of sporting events, excluding aspects related to the security of events.

DECISION-MAKING SUPPORT ELEMENTS

The possible decision to cancel or postpone sporting events is based on the assessment of a number of criteria: the conditions of access

welcoming athletes and organizing the events.

Nature of sports disciplines

✓ **Intensity** and duration of effort;

✓ **Additional heat source :**

- Mandatory personal protective equipment (e.g., combination);
- Engine (e.g., motorsports).

Conditions for holding the event

✓ **Indoor or outdoor environment :**

- Indoors: ventilated or air-conditioned premises;
- Outdoors: presence or absence of shaded areas for athletes and/or the public.

✓ **Environment of evolution** (e.g., aquatic);

✓ **Whether or not there** are spectators;

✓ **Number of participants** and spectators;

✓ **Suitability** of rescue teams;

✓ **Effective implementation** of prevention measures:

- Refreshments for athletes: shower, misting spray...;
- Hydration measures for athletes and the public: access to drinking water points or provision of bottled water;
- Adaptation of sporting rules: reduction of distances and practice times, modification of routes, implementation of breaks for rehydration;
- Shifting the schedule to a less hot period of the day (early morning or evening).

Quality of participants

- ✓ **Highly trained athletes** (professional or high-level athletes), or occasional athletes.

Contextual elements

- ✓ **Presence of wind, storm, etc.;**
- ✓ **Determination of the WBGT index :** see sheet technique II-2-1 of the High Council for Public Health.

➤ http://www.hcsp.fr/Explore.cgi/Telecharger?NomFichier=hcspr20140415_recosanit-plannationcanicule2014.pdf

EVALUATION PROCESS AND DECISION

The organizers of the sporting event are responsible for assessing the local situation, possibly in conjunction with local authorities.

and the decentralized state services, in order to assess the conditions under which the sporting event will take place, relying in particular on decision-making support elements

as outlined above.

Therefore, it appears from this analysis that the conditions under which the demonstration took place

If the sporting results are unsatisfactory, local decision-makers make the decision:

- ✓ **To shift the timing** of the demonstration to a cooler period of the day (early morning or evening)
- ✓ **Or to reduce** the number of tests or the par-course ;
- ✓ **Or even to prohibit, cancel or postpone** the sporting event to a later date.

They inform the prefect of the department concerned.

FICHE O3/O

DECISION-MAKING GUIDELINE: CLOSURE GROUP ACCOMMODATION FACILITIES FOR MINORS

Red alert – extreme heatwave | Recipients: *organizers of group activities for minors as provided for in article L.227-4 of the social action and families code, prefects, IA-DASEN.*

CONTEXT

Children represent a population vulnerable to heat, *especially when*
This one becomes extreme.

Placing a department under red heatwave weather alert should lead local decision-makers to assess the situation and the advisability of temporarily suspending group activities for minors as defined in Article R.227-1 of the code

social action and families, particularly those accommodating minors under 11 years of age (day care, residential care and care
scouting with and without accommodation).

The purpose of this document is to provide these local decision-makers (organizers of group activities for minors, IA-DASEN in conjunction with the prefects) with elements of assessment enabling them to objectify their decisions relating to the temporary suspension of the aforementioned activities.

DECISION-MAKING SUPPORT ELEMENTS

The possible decision to suspend a group activity for minors is based on the assessment of the conditions of care for children by the organizers and the services of the IA-DASEN in conjunction with the prefect.

These evaluation criteria will be the subject of consultation with the organizers of receptions, in particular the local authorities.

They could be of two kinds: structural and cyclical.

Specific considerations at the local or welcoming place the minors (structural data)

✓ **Presence of devices for obscuring** or protecting facades,

✓ **The presence of sufficient fixed or mobile air conditioning units** in working order, or ventilation systems allowing for nighttime air renewal,

✓ **Accommodation in tents** or in leisure accommodations (chalets, bungalows, yurts, caravans, etc.)

-
- ✓ **Presence of shaded areas** within the premises of the reception area;
 - ✓ **Access to drinking water points** or provision of bottled water;
 - ✓ **The number of days** in red heatwave.

Contextual elements (current economic data)

- ✓ **Presence of wind ;**
- ✓ **Specific actions** aimed at reducing the temperature of buildings (watering for example).

ASSESSMENT PROCESS AND DECISION

The organizers are responsible for assessing the local situation, in conjunction with the prefect, the decentralized state services, and local authorities.

territorial assessments are conducted for childcare facilities located in departments under red weather alert. They evaluate the conditions for welcoming children, drawing in particular on decision-making support materials.

as outlined above.

When this analysis reveals that the conditions for welcoming children are not satisfactory, local decision-makers decide to discontinue the provision of care.

They inform the prefect of the department concerned. Under the conditions mentioned in Article L.227-11 of the Social Action Code and families, the latter may, if necessary, interrupt the receptions concerned.

ANNEXES

GLOSSARY

AASC : Approved civil security associations

ARS : Regional Health Agency

CADA : reception center for asylum seekers

CCAS : municipal social action center

CCS : Health Crisis Center

CDOS : Departmental Olympic Committees and Athletes

DSDEN : Departmental Services of National Education

ESMS : health, social and medico-social establishments

IA-DASEN : Academy Inspector - Academic Director of National Education Services

MF : Météo France

ORSAN : organization of the health response

ORSEC : Civil Security Response Organization

SDIS : Departmental Fire and Rescue Service rescue

SIAO : Integrated Reception and Orientation Service

SPASAD : a multi-purpose home care and support service

SPF : Public Health France

SSAD : Home care and support service

SSIAD : Home nursing care services

DIRECTORIES ACTORS TERRITORIAL CONCERNED

The email and telephone contact details of the prefect's representatives for the preparation and health management of heat waves must be provided to him, prior to the seasonal monitoring period, for each of the actors concerned:

- ✓ local authorities,
- ✓ the various inter-ministerial departmental delegations (DDI),
- ✓ the departmental directorate of national education services (DSDEN) and the rectorate,
- ✓ the Regional Health Agency (ARS),
- ✓ health, social and medico-social establishments (ESMS),
- ✓ the departmental council,
- ✓ social protection organizations,
- ✓ home help and assistance services person,
- ✓ approved civil defense associations,
- ✓ the departmental fire and rescue service (SDIS),
- ✓ representatives of the prison system,
- ✓ funeral service providers,
- ✓ the Regional Olympic Committees and Sportsmen (CROS) and Departmental Committees Olympic and Sports Committees (CDOS), the organizers of sporting events,
- ✓ Transport and energy distribution infrastructure managers,
- ✓ the people responsible for the production and distribution of drinking water,
- ✓ transport operators (SNCF, etc.) and the transport and mobility organizing authorities,
- ✓ managers of accommodation facilities and adapted housing,
- ✓ social monitoring actors (outreach teams, health mediation teams, 115 emergency hotline, social emergency services, day centers, etc.),
- ✓ SIAO managers.

Since these contacts must be reachable throughout the seasonal monitoring period, it is up to each actor to identify *at least* one principal and one alternate, whose contact details will be communicated to the prefect, as well as a generic mailbox which is monitored every day.

For example:

holder	name	portable	period
alternate	name	portable	period
Generic ball
